FLOODIN PRO

CHECK-IN API

Tutorial

HOW DO CHECK-IN INTEGRATIONS WORK?

Customers check in and sign a digital indemnity form. Their details (Name, Email and mobile no.) collected from the digital form are automatically added to a new project / experience in Floodin PRO.

You never need to manually enter details again!

HOW DO CHECK-IN INTEGRATIONS BENEFIT MY OP?

You no longer have to enter customers details in manually saving you time and limiting human error.

For e.g. Take a group activity like a whale watching tour scenario:
50 customers details are required to be entered into a project in order to send them their video / photo package link.
By integrating with the digital check-in form all 50 customers details will be automatically added to one experience / project as each of them check in.

HOW DO WE SETUP A CHECK-IN INTEGRATION?

Visit our integrations page at www.floodinprom/integrations and fill out the integration form.

You can either put us into contact with your current provider or choose from the list of partner digital indemnity providers who are already integrated with Floodin PRO.
