

OhmConnect, the leader in consumer energy services, is seeking a motivated and passionate Senior Software Engineer to apply software development principles to create a world class solution that reimagines how people use energy.

Role:	Senior Software Engineer	Type:	Full Time
Open:	Immediately		

ABOUT US

We were created to improve the lives of people and the health of the planet by reimagining the way we use energy. We are tackling such a grand challenge by solving massive inefficiencies in energy markets, changing how people use and view energy, and connecting smart homes with the smart grid. At OhmConnect, we build products that connect deeply with the consumers and invite them to take action to positively impact the planet, people, and pocketbooks.

WHAT WE DO

Our products encompass:

- Consumer facing applications that use home automation control and user behavior modeling to shape consumer energy consumption.
- Integrations with a growing set of devices and appliances - smart plugs, thermostats, chargers, etc.
- Smart Meter data ingestion and analysis for consumer consumption forecast.
- Bidding, monitoring and settlement processes for the energy markets.

ROLE SUMMARY

As a member of our engineering team, you will work closely with product management, business stakeholders, customer support, and engineering colleagues to develop critical product features and third party integrations. Your responsibilities include:

- Design, develop, test and deploy new code.
- Prioritize and manage development and issue resolution activities.
- Participate in our agile development process - regular team updates, standup meetings, 1-on-1's.
- Perform peer code review, mentor junior developers.
- Implement application monitoring tools and proactively monitor application performance.
- Work on all aspects of our stack: Python, Flask, HTML, CSS, Javascript (jQuery), MySQL, Celery, AWS (EC2, ELB, RDS, Redshift, S3, SQS, SES, etc), Ubuntu, Apache, Redis, RabbitMQ, Git, Jira.

DESIRED SKILL SET

- Strong knowledge of Python or Ruby.
- Strong background in web front-end development and using HTML, CSS and Javascript / JQuery. Experience with Vue.js / Angular / React is a plus.

- Solid understanding of database interactions in SQL.
- Dedication to writing clean, robust code, with good unit test coverage.
- Excellent 1-1 and team communication skills.
- Passion for learning.
- Independent, results oriented.
- Enjoy a fun and a fast-paced environment.
- Desire for a career that makes an impact.
- 5+ years software development experience preferred.

WHAT WE OFFER

- Outstanding benefits package, stock options, and salary commensurate with experience.
- Value a good work-life balance. Other company perks include unlimited vacation, commuter benefits, parental (both maternal and paternal) leave benefits.
- Equal Opportunity Employer who is committed to supporting equality and diversity in our offices.
- Offices in San Francisco and the South Bay. We spend 2 days a week at each location and have one flexible location day.
