Physics of Sight Lesson Summary and Vocabulary

Lesson Summary: The YSI *Physics of Sight* program touches on topics in biology, neuroscience, and physics to offer a basic overview of vision and light. The class begins by helping to complete a layered poster of an eye, learning about how each of its structures functions in human sight. They next apply this newfound understanding to a series of optical illusions, learning about the blind spot in the human eye and the way the brain processes visual information. Finally, students explore the nature of the light spectrum through prism experiments and build a spectroscope they can take home.

Vocabulary: Below are words and concepts that relate to the *Physics of Sight* program.

Blood vessel: Any of the vessels (arteries, veins, or capillaries) through which blood circulates.

Cornea: The transparent part of the sclera covering the iris and the pupil

Fovea: A small pit or depression in a bone or other structure.

Iris: The ring of muscle forming the colored portion of the eye and containing a circular opening, the pupil, in its center.

Lens: A convex, transparent part of the eye behind the iris that focuses light on the retina.

Light: Electromagnetic radiation visible to the eye.

Optic nerve: Cranial nerves consisting of sensory fibers that conduct impulses from the retina to the brain.

Pupil: The expanding and contracting opening in the iris of the eye, through which light passes to the retina.

Refraction: The change of direction of a ray, such as light, in passing from one medium into another in which its velocity is different.

Reflection: The return of light, heat, sound, etc., after striking a surface.

Retina: The innermost layer of the back of the eyeball that receives the image produced by the lens.

Sclera: A dense, white membrane that forms the external covering of the eyeball.

Sight: Perception of objects by use of the eyes

Spectrum: The band of colors produced when sunlight is passed through a prism, comprising a rainbow

Vitreous humor: The transparent gelatinous substance filling the eyeball behind the lens.

Physics of Sight Language Arts Crossword Puzzle

- | | | | | | | | |
|--------------|------------|--------|--------|-------|----------|----------------|-------|
| BLOOD VESSEL | CORNEA | FOVEA | IRIS | LENS | LIGHT | OPTIC NERVE | PUPIL |
| REFRACTION | REFLECTION | RETINA | SCLERA | SIGHT | SPECTRUM | VITREOUS FLUID | |

Across

1. A convex, transparent part of the eye behind the iris that focuses light on the retina.
4. A dense, white membrane that forms the external covering of the eyeball.
8. The return of light, heat, sound, etc., after striking a surface.
10. The transparent gelatinous substance filling the eyeball behind the lens
12. The ring of muscle forming the colored portion of the eye and containing a circular opening, the pupil, in its center..
13. Electromagnetic radiation visible to the eye.
14. The expanding and contracting opening in the iris of the eye, through which light passes to the retina
15. A small pit or depression in a bone or other structure.

Down

2. The band of colors produced when sunlight is passed through a prism, comprising a rainbow
3. The transparent part of the sclera covering the iris and the pupil.
5. The change of direction of a ray, such as light, in passing from one medium into another in which its velocity is different.
6. The innermost layer of the back of the eyeball that receives the image produced by the lens.
7. Any of the vessels (arteries, veins, or capillaries) through which blood circulates.
9. Nerves consisting of sensory fibers that conduct impulses from the retina to the brain
11. Perception of objects by use of the eyes

Answer Key

Physics of Sight

Language Arts Crossword Puzzle

Across

1. A convex, transparent part of the eye behind the iris that focuses light on the retina (**lens**).
4. A dense, white membrane that forms the external covering of the eyeball (**sclera**).
8. The return of light, heat, sound, etc., after striking a surface (**reflection**).
10. The transparent gelatinous substance filling the eyeball behind the lens (**vitreous humor**).
12. The ring of muscle forming the colored portion of the eye and containing a circular opening, the pupil, in its center (**iris**).
13. Electromagnetic radiation visible to the eye (**light**).
14. The expanding and contracting opening in the iris of the eye, through which light passes to the retina (**pupil**).
15. A small pit or depression in a bone or other structure (**fovea**).

Down

2. The band of colors produced when sunlight is passed through a prism, comprising a rainbow (**spectrum**).
3. The transparent part of the sclera covering the iris and the pupil (**cornea**).
5. The change of direction of a ray, such as light, in passing from one medium into another in which its velocity is different. (**refraction**).
6. The innermost layer of the back of the eyeball that receives the image produced by the lens (**retina**).
7. Any of the vessels (arteries, veins, or capillaries) through which blood circulates (**blood vessel**).
9. Nerves consisting of sensory fibers that conduct impulses from the retina to the brain (**optic nerve**).
11. Perception of objects by use of the eyes (**sight**).

Physics of Sight Extension Activities

The extension activities listed below are from RAFT (Resource Area For Teaching). RAFT educational content is available online (www.raftbayarea.org) at no cost and is aligned to California Science Standards and Next Generation Science Standards. Below is a selection of post-visit activities from RAFT to build on student learning about physics and sight.

[RAFT Idea: Café Wall Illusion - Resource Area For Teaching - RAFT Bay Area](#)

Grades Covered: 4 through 12

Subjects Covered: Physical Science, Life Science

Curriculum topics: Vision, Function of the Eye, Illusion

Description: Students learn about how their eyes function with this fun illusion

<http://www.raftbayarea.org/ideas/Cafe%20Wall%20Illusion.pdf>

[RAFT Idea: Animated Flip Books - Resource Area For Teaching - RAFT Bay Area](#)

Grades Covered: 2 through 8

Subjects Covered: Physical Science, Life Science, Art

Curriculum topics: Eye, Persistence of Vision, Animation

Description: This fun activity will give students the opportunity to create basic animations that can help them understand how motion pictures and the human eye work.

<http://www.raftbayarea.org/ideas/Animated%20Flip%20Books.pdf>

[RAFT Idea: Eye See It - Resource Area For Teaching - RAFT Bay Area](#)

Grades Covered: 3 through 12

Subjects Covered: Physical Science, Life Science

Curriculum topics: Optics, Anatomy, Vision, Structure, Function of the Eye

Description: Use a bulk CD container to model parts of the eye and their functions.

<http://www.raftbayarea.org/ideas/Eye%20See%20It.pdf>

[RAFT Idea: Image Viewer - Resource Area For Teaching - RAFT Bay Area](#)

Grades Covered: 3 through 12

Subjects Covered: Physical Science, Life Science

Curriculum topics: Light, Optics, Refraction

Description: Explore images formed by a pinhole and a lens. See what the eye really "sees" - an inverted image!

<http://www.raftbayarea.org/ideas/Image%20Viewer.pdf>

Physics of Sight Education Standards

This page references California Science Content Standards, Common Core, and Next Generation Science Standards, which students will be exposed to during the program.

California Science Content Standards Fifth Grade: 6. Scientific progress is made by asking meaningful questions and conducting careful investigations. As a basis for understanding this concept and addressing the content in the other three strands, students should develop their own questions and perform investigations. Students will:

- a. Classify objects in accordance with appropriate criteria.
- b. Develop a testable question.
- c. Plan and conduct a simple investigation based on a student-developed question and write instructions others can follow to carry out the procedure.
- d. Identify the dependent and controlled variables in an investigation.
- e. Identify a single independent variable in a scientific investigation and explain how this variable can be used to collect information to answer a question about the results of the experiment.
- f. Select appropriate tools (e.g., thermometers, meter sticks, balances, and graduated cylinders) and make quantitative observations.
- h. Draw conclusions from scientific evidence and indicate whether further information is needed to support a specific conclusion.

Excerpted from CA State Standards: <http://www.cde.ca.gov/>

Common Core Fifth Grade:

Speaking and Listening Standards: Students will...

1. Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on *grade 5 topics and texts*, building on others' ideas and expressing their own clearly.
 - a. Come to discussions prepared, having read or studied required material; explicitly draw on that preparation and other information known about the topic to explore ideas under discussion.
 - b. Follow agreed-upon rules for discussions and carry out assigned roles.
 - c. Pose and respond to specific questions by making comments that contribute to the discussion and elaborate on the remarks of others.
 - d. Review the key ideas expressed and explain their own ideas and understanding in light of the discussion.
2. Summarize a written text read aloud or information presented in diverse media and formats, including visually, quantitatively, and orally.
3. Summarize the points a speaker or media source makes and explain how each claim is supported by reasons and evidence, and identify and analyze any logical fallacies.

Excerpted from Common Core Standards: <http://www.corestandards.org/>

Next Generation Science Standards Fifth Grade: Structure and Properties of Matter

Physics of Sight Education Standards

- **5-PS1-3:** Make observations and measurements to identify materials based on their properties.
 - **Science and Engineering Practices:**
 - **Planning and Carrying Out Investigations** Planning and carrying out investigations to answer questions or test solutions to problems in 3–5 builds on K–2 experiences and progresses to include investigations that control variables and provide evidence to support explanations or design solutions.
 - Make observations and measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon. (5-PS1-3)
 - **Disciplinary core ideas:**
 - **PS1.A: Structure and Properties of Matter:** Measurements of a variety of properties can be used to identify materials. (Boundary: At this grade level, mass and weight are not distinguished, and no attempt is made to define the unseen particles or explain the atomic-scale mechanism of evaporation and condensation.) (5-PS1-3)
 - **Crosscutting Concepts**
 - **Scale, Proportion, and Quantity:** Standard units are used to measure and describe physical quantities such as weight, time, temperature, and volume. (5-PS1-3)

Engineering Design

- **3-5-ETS1-2.** Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.
 - **Science and Engineering Practices:**
 - **Constructing Explanations and Designing Solutions** Constructing explanations and designing solutions in 3–5 builds on K–2 experiences and progresses to the use of evidence in constructing explanations that specify variables that describe and predict phenomena and in designing multiple solutions to design problems.
 - Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design problem. (3-5-ETS1-2)
 - **Disciplinary core ideas:**
 - **ETS1.B: Developing Possible Solutions:** Research on a problem should be carried out before beginning to design a solution. Testing a solution involves investigating how well it performs under a range of likely conditions. (3-5-ETS1-2)
 - At whatever stage, communicating with peers about proposed solutions is an important part of the design process, and shared ideas can lead to improved designs. (3-5-ETS1-2)
 - **Crosscutting Concepts**
 - **Influence of Science, Engineering, and Technology on Society and the Natural World:** Engineers improve existing technologies or develop new ones to increase their benefits, decrease known risks, and meet societal demands. (3-5-ETS1-2)
- **3-5-ETS1-3:** Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.
 - **Science and Engineering Practices:**
 - **Planning and Carrying Out Investigations:** Planning and carrying out investigations to answer questions or test solutions to problems in 3–5 builds on K–2 experiences and progresses to include investigations that control variables and provide evidence to support explanations or design solutions.
 - Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered. (3-5-ETS1-3)

Physics of Sight Education Standards

- **Disciplinary core ideas:**
 - **ETS1.B: Developing Possible Solutions:** Tests are often designed to identify failure points or difficulties, which suggest the elements of the design that need to be improved. (3-5-ETS1-3)
 - **ETS1.C: Optimizing the Design Solution:** Different solutions need to be tested in order to determine which of them best solves the problem, given the criteria and the constraints. (3-5-ETS1-3)
