

Diesel Dipper® maintains diesel on-board Hambleden Lady

The Problem

Mr Paul Fisher purchased the Hambleden Lady, a Princess 33 Motor Cruiser which had been laid up for around 2 years. To clean the old diesel in the tank, Paul hired our Diesel Duck® and having seen the damaging effect water has on diesel first hand, he fully understands the importance of keeping his diesel water free and decided to fit our Diesel Dipper® -12v static dewatering & fuel cleaning system. Paul did not have a drain on his tank to remove water from the very bottom where water collects, so he also purchased our Dip Tube Assembly to remedy this.

Testimonial

"After being totally satisfied by the performance of the Diesel Duck® I hired from MarShip, I decided to purchase their Diesel Dipper® and Dip Tube Assy (for reaching the bottom of the tank) to keep my diesel free of water and contaminants while at sea. I was able to install onto my fuel tank without issue.

Since fitting the Diesel Dipper® we serviced the engines and after all of the customary fluid/lubricant/filter changes, both engines fired up without even having to prime the fuel system. Engines running smoothly with no dirty exhaust fumes, and little smoke at all. Can only assume this is all influenced by the clean fuel assisted by the Diesel Duck® and Diesel Dipper®

Paul Fisher - Owner of Hambleden Lady

Boat type:
Princess 33 Motor Cruiser

Engines:
Twin Mermaid Diesel
