

## MarShip upgrade Air Filtration onboard Hanson's ARCO DEE

Hanson approached us for a solution to their old and ineffective Air Filtration onboard Arco Dee.

We accessed existing filtration on the main alternators, Engine Room Forced Draft Fans and Accommodation Fan units.

All systems were using standard filter material which is difficult to clean as it absorbs dirt restricting air flow and requiring frequent replacing then sent to land fill for disposal so not environmentally friendly.

MarShip supplied a more effective, sustainable and environmentally friendly solution with TPro Panel filters. Manufactured in the UK to MarShips own design: TPro Panel Filters are:

- Fully washable with smooth F9 rated filter media encapsulated in Polypropylene mesh for long life.
- Fully Pleated to offer 6 times greater surface area for increased dirt loading and air flow.
- Easily cleaned with environmentally friendly cleaners and long lasting so no waste sent to land fill.
- The modern environmentally responsible and cheaper solution to filter material on a roll.
