

Overview

LiveSchool is changing the way schools track, reward, and improve behavior. Schools around the world are abandoning old-fashioned paper systems to use our real-time platform.

As a Frontend Engineer at LiveSchool, you will build tools that will be used by tens of thousands of educators to make school more fun and fair. You will use web technologies to develop reusable UI components, real-time classroom games, and school-wide communication tools.

Skillset

We are looking for a well-rounded front-end developer with at least three years experience in the field, including:

- JavaScript, Vue.js/Vuex, Firebase
- Large scale, single-page applications with live data binding
- User experiences with attention to detail across form factors
- Performance optimization and regression testing

Bonus Points

If you have an overlapping backend (Node.js, AWS) or design (UI/UX, illustration) skillset, you can expect to put it to good use.

Why LiveSchool?

We're a fun, committed team working to make a positive impact in schools. We have an informal office environment complete with dog, snacks, and a keg. Your role will come with a competitive compensation package, including salary, health insurance, and participation in the company stock option plan. Remote work with quarterly visits 👍 (PST - EST only).
