

SCORECARD

A Maalka Program for Companies

About the Program

Sustainability is about more than just counting kilowatt-hours. Scorecard brings forward the qualitative aspects of your sustainability initiative and allows users to collaborate around actions that encourage positive behavioral, cultural, and organizational change. And the best part is these practices are gamified and tailored to fit your sustainability goals.

Tailor Your Scorecard

Define questions for your teams and assign points based on the aspects you find most important. Track scores for buildings across your portfolio and use the data to improve policies and operations.

Engage Your Community

Engage a broad set of stakeholders - employees, facilities, staff - and empower them by illustrating how their individual actions impact the overall culture and sustainability of your organization.

Use-Case: START Program

Green Schools Alliance, the largest sustainability network of K-12 schools in the world, is using Scorecard to scale their Sustainability Tracking & Roadmap Tool (START) across their 10,000 member schools. Scorecard provides schools with an easy-to-follow, interactive program for tracking the implementation of 17 United Nation

Sustainability Development Goals. Furthermore, it gives users access to a comprehensive library of technical resources to guide them towards improving their sustainability. By administering START through Scorecard, the Alliance can track metrics across thousands of schools and target those that need the most support.
