

Enabling Organizations to Meet Microsoft Teams Calling Capabilities through Virtual Software and On-Premise Hardware

EquiINET's pioneering Microsoft Teams Direct Routing service for seamlessly connecting Microsoft 365 to legacy phone systems (PBX) or landline (PSTN) is delivered to users simply through Direct Routing, with either On-Premise Hardware (xINA), Virtualized Software (VM) or Hybrid Cloud (HC) using Ribbon's SBC.

Introduction

Enabling users to benefit quickly from making and receiving traditional telephone calls from inside and alongside Microsoft Teams; integrate your existing PBX and PSTN service, port transfer your telephone numbers, bring your own provider and ensure call quality (QoS).

Equiinet is one of the worlds most trusted cyber security and voice system provider, optimizing Microsoft 365 capabilities as one of Microsoft's most recognized partners and enhancing innovative innovations to fit the technology around your business and not the other way that others will try to impose.

Equiinet is available around the globe delivering highly available enterprise grade security services with encryption from endpoint to cloud and beyond.

Ribbon is the largest SBC provider for Microsoft Direct Routing holding a prime leadership over the Microsoft's coveted certification.

Technical Overview

Equinet's Direct Routing solution is hosted within Microsoft datacenters, so your calls between Equinet and Office 365 never leave the Microsoft Cloud infrastructure.

Equinet allows Office 365 Teams users to connect into your phone system just like an existing desk phone or softphone. This means you do not touch any of your existing phone system configuration and you only need to give the Teams capability to users that need it. Everything else stays the same.

No number porting, end user training or complex reconfiguration is required. No hardware or software required, Equinet is a true multi-tenant Cloud service, you simply use it on a per-user subscription.

Until now, getting Office 365 Teams integration has been cost prohibitive for all but the larger corporations. Equinet removes the need to buy expensive additional equipment, consultancy and licensing; instead a simple per-user subscription and provides the full interface between your PBX and Office 365.

It works with all Cloud and on-premise PBXs that support a SIP phone. It is as simple as that!

Benefits of Equinet's Direct Routing

- Single login with activations in a few intuitive steps
- Bridge between PBX, PSTN & Microsoft Teams in minutes
- Telephone calling with Equinet calling plan
- Compatible with all systems
- Selective selection of Teams and non-Teams user licensing for lower costs
- 99.999% Uptime guarantees
- Interoperable with existing telephony software
- Volume discounts
- Fully managed
- Support in over 20 languages
- Connect your desk phone to your PC and Mobile App

IT Professionals

- Can provide telephone calling to Microsoft Teams with affordable calling plans and interoperability
- Can deploy a single solution
- Can be Cloud, On-Premise or Hybrid for compliance and scalability
- Can avoid business disruption, capital expenditure and silently integrate
- Can easily deploy remote worker infrastructure

Your calls pass easily between your PBX and Microsoft Office 365 while staying within the Microsoft Cloud. Equinet integrates cross platforms enabling disparate system to unify communications with the world best productivity suite.

Company Leaders

- Can improve efficiency
- Can provide remote and home working
- Can manage costs and licenses
- Can allow users to bring their own devices more safely
- Can improve user viability and productivity
