

CUBIC MACHINERY

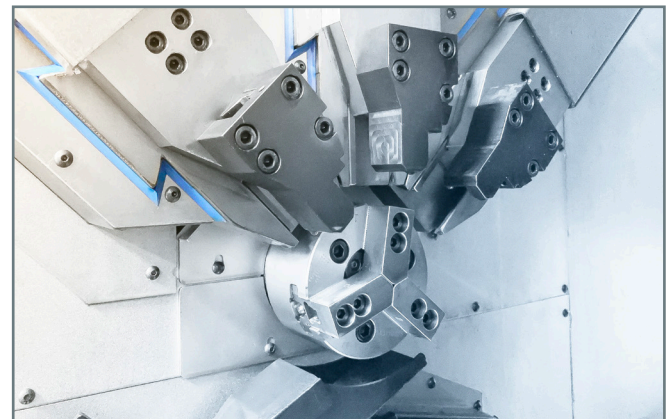

Newsletter | September 2019

**Cubic Machinery
will be presenting the
GT Max-25S
at IFE in Las Vegas on
September 18-19.**

The annual International Fastener Expo has long been a highlight of the fastener industry by bringing people together and introducing the latest innovations in fastener processing machines.

With IFE being a much-anticipated event Cubic Machinery strives to bring the latest developments in fastener turning centers to the show every year, and this year is no exception. The arrival of the GT Max-25S heralds a comprehensive solution to the age-old quest of combining high volume production with ease of setup. The GT Max-25S features 3 XZ cross slides and a gang tool post. It features state of the art FANUC 31iB controller. It allows up to 4 simultaneous cuts greatly reducing machining time and offers a cost-effective CNC alternative to cam-driven screw machines.

Couple this with the automatic fastener feeding systems that Cubic is famous for and you have a perfect recipe for lightning-fast unattended 2nd-op work.

Come see the Cubic GT Max-25S at booth #2153.
