

DataArt Partners with Financial Strides to Expand Security Solutions for Financial Services Firms

NEW YORK, June 8, 2020 – DataArt, a global software engineering firm that designs, develops, and supports high-quality solutions, and Financial Strides, a fintech company that specializes in building innovative financial products, today announced a partnership to provide end-to-end solutions for businesses in the financial services industry. The two companies have successfully completed five joint projects, which provided the impetus to establish a formal partnership.

This partnership will leverage the powerful combination of DataArt's technological expertise and deep cybersecurity knowledge with Financial Strides' experience in helping financial services companies navigate the challenges of regulation, security risks, and product architecture missteps. A significant advantage will be the comprehensive service offering that spans everything from idea creation (gap analysis, use case scenarios, etc.) to project management, security evaluation and with compliance management, including the technical aspects of PCI-DSS certification.

Together the companies will provide high-end security consultancy services through a structured approach and consistent methodology based on industry-wide best practices and accompanying resources, such as PCI DSS, OSSTMM, and OWASP. Financial Strides' longtime cooperation with banks, regulators and industry advisory groups will add synergistically to DataArt's range of security solutions.

[Dmitry Vyrostkov](#), Head of DataArt's Security division, said:

“DataArt and Financial Strides have jointly delivered several successful projects over the past year. Our partnership can help Fintech organizations develop faster and safer paths to innovation and quickly detect, react, and recover along all points of the software development life cycle.”

[Patrice Peyret](#), Principal Member at Financial Strides, said:

“In today's world, addressing software vulnerabilities is more important than ever before. The joint services we offer in partnership with DataArt ensure that our clients have access to every security protocol, customized for their specific business needs and compatible with their size and budget. Moreover, our expertise is fine-tuned to meet the specific needs of the financial services industry.”
