

# Quantifying Consciousness

Developing Methods to Show Consciousness is an Engineerable Force

## Description

The nature of consciousness remains a mystery. Like electricity and gravity, scientists are quick to describe its effects, though fall short when describing the cause or true nature. Dunedain is postulating that consciousness is a force that can be quantified and engineered. Further, it is the fundamental force giving rise to all physical forces: gravity, electromagnetism, nuclear strong & weak. Consciousness is the unifying force of nature - all other forces are essentially fractals or harmonics of its fundamental.

Dunedain believes this force can be quantified and engineered. Beginning on an individual level, projects are being designed to show how this force has an impact on the physical world. An individual's thoughts, emotions and intentions interact with and manipulate their experience and world view, and extends into others. There is a cause and effect mechanism in place which can be directed much more than is currently understood.

*Engineerable force - consciousness*

*Mind meets matter via energetic structures*

Dunedain considers every atom a “white vortex” - the antithesis of black hole. Formless “thought” patterns and intentions are driving all matter into manifestation; the etheric atomic energetic structure is the entry point for consciousness.

## Intended Use & Purpose

All things are vibrational, though the nature of vibration is misunderstood. Mechanical and electromagnetic vibration are essentially longitudinal, 4-dimensional holograms. They are able to contain vast amounts of information; the current carrier wave concept is a primitive step in uncovering the potential of the transmission of data via vibration.

The transmission of consciousness can be thought of as formless extension of the transmitter/receiver configuration used in electronics. Information, knowledge, and energy (or force), can be embedded into a formless carrier signal. This signal can be received by various “antennas” or “receivers”. The receiver can be a person, a plant, water - technically, anything. Dunedain would like to begin with experiments using water as the receiver.

Short term intentions of this project are to begin to better understand the nature of consciousness - to explore the power of this creative force on an individual level, establish a cause/effect relationship, and a level of responsibility and accountability. The longer term goals are to help instill belief and direction, ensure this force of

consciousness is pointed in a positive manner. This could apply to the individual and collective level. The interconnectedness between the form and the formless implies a continuation, and a sense of true progression, if the creative force of intent is pointed in a generative direction.

## Status

Proposed experiments involve water: vibrational entrainment, mental imprints, energetic structure manipulation. Methods of measurements include water “exclusion zone” voltage, micro-cymatics, wheatgrass and water analysis.

Related projects in the realm of quantifying consciousness are “BCI Cymatics” and “BCI/AR”. These projects are designed to exploit current BCI (brain computer interface) technology to develop alternative methods of communication and collaboration.

## Budget, Resources, Timeline

Vibration entrainment, resonance, holographic projection, water and micro-cymatics would be the starting points for these intention related experiments. The understanding of atomic energetic structures could play a very important role. A very specific shape, size and speed in the form of an energetic structure is the fundamental of atomic manifestation. The ability to manipulate matter on this level has interesting implications.

Project	Scope	Resources	Estimate	Duration
Mind Over Matter	Energetic structures - manipulate water by focusing on different energetic structures. (Hydrogen and oxygen are double ovoid shape) Attempt to mimic properties of other elements - results found in water.	Dunedain Reid	\$500,000	6 months
Water Talks	Mental impressions on water displayed via ice crystals (Emoto) or cymatics (Reid). Used for communication.	Dunedain Reid Yasuyuki Nemoto	\$1,000,000	12 months
Water Entrainment	Water “memory”, “wireless” transmission of information between separated water volumes. Resonance and direction.	Dunedain Pollack	\$500,000	6 months
