

Touch-Up Marker Kit

Instructions:

The touch-up marker will help mask the appearance of minor scratches, scrapes and chips that may have occurred to your floor.

1. Begin with evaluating the colors in your floor— Many of our products have highly varied planks in both color and design, so it is important to evaluate the area you are repairing. Consider which color to begin the touch-up process with. If your floor has a combination of colors, begin with the undertone color in your kit and work your way up to the primary color. The primary color is usually the most dominant color in your floor.
2. Shake the marker for a minimum of 10 seconds before use. If the marker tip detaches from excess lacquer, simply place it back into the marker socket.
3. Before pressing the marker to the plank, use a scrap surface to press and dot the marker tip onto until the lacquer flows through.
4. The lacquer should appear flowing at the tip of the marker and the color strongly visible
5. Once the tip of your marker is saturated, you can begin touching up your floor using light even strokes, working the product in by layers following the design and allowing drying time between applying color layers.
6. Be sure to follow the marker inside the damaged area, keep a dry cloth handy to remove any excess lacquer.
7. After applying the primary color, use secondary colors to follow the design of your flooring. For help with determining primary and secondary colors, contact customer support.
8. Allow 10-15 minutes for color to fully dry.

*Note that the color does not fully set until completely dry. Allow 10-15 minutes for color to dry fully.
