

MuniPedia

Management begins with access to knowledge...

MuniPedia connects all units of the municipality and focuses on solving any problems in accessing information.

Munipedia offers the opportunity to solve many problems without additional investment in some specific Software Products and can expand flexibly.

Functionalities

1

Single Point of
Access to All
Content

2

Easily Creation of
Digital Archive

3

Gathering of Units
Together

4

Collaboration
Platform

5

Information
Exchange with
Stakeholders

6

Access to and
Reflection of the
Voice of Citizens

7

Sustainability

8

Security

Single Point of Access to All Content

1

Accesses instantly to over 200 different type of files such as Word, Excel, PDF, AutoCAD, from a single point, and speeds up your business processes.

Finds similar or duplicate files, and does versioning automatically.

Searches all contents from various data sources, views, and associate all of them with each other.

Reduces some specific software license fees, and increases learning performances.

Easily Creation of Digital Archive

2

Does not require manual data entry. Reads and evaluates the data produced in organization as is.

Removes the line between available documents and archive, and provides an intelligent archive management that you can use 24/7.

Creates automatic maps from the available documents. This way, GIS integration with archive is completed automatically.

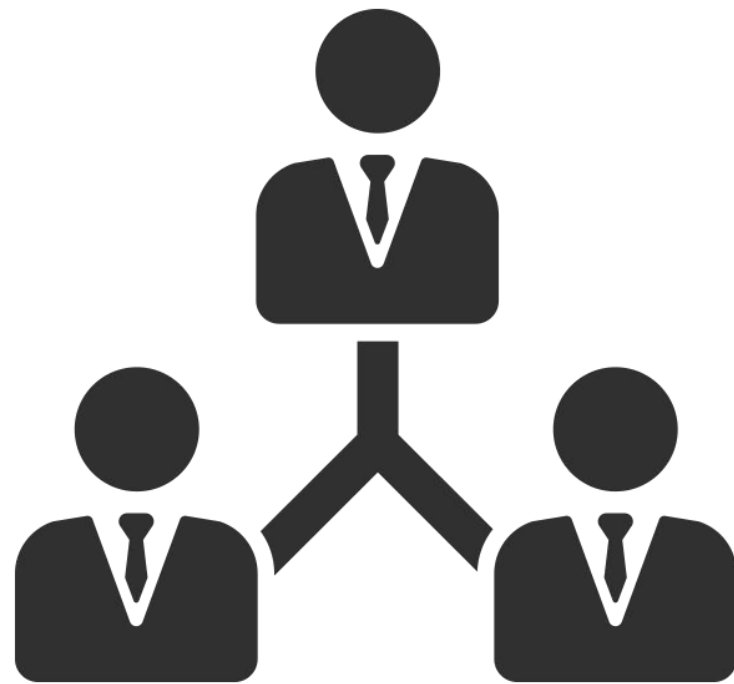

Gathering of Units Together

3

MuniPedia enables all units in a municipality to work together by accessing various databases including those of DMS, GIS, eDMS, ERP, CRM, and MIS from a single point.

Collaboration Platform

Provides a joint work platform for the collaboration of departments. This way, tasks can be assigned, files can be shared, changes can be tracked, notes can be written to any content and then the content be added to the same data source.

Thus, whatsapp, e-mail, SMS and verbal communication problems are eliminated.

Information Exchange with Stakeholders

5

Municipal units; It allows district municipalities, other institutions and contractors to work through one interface.

For example, when a county municipality uploads zoning plans, you can access all of them from one interface, or you can share this information with citizens.

Access to and Reflection of the Voice of Citizens

Get immediate news about the press and social media. Just choose the channels you are interested in, MuniPedia will watch all of them for you. In this way, you can take much quicker action on complaints and demands and increase citizen satisfaction.

Sustainability

7

Sustainability is one of the most important goals of MuniPedia.

When a new software or database is installed at a Municipality, MuniPedia can be integrated in the new system easily and instantly.

MuniPedia provides a secure environment for both cyber security, data security and personal data protection.

Since there is no physical access to the disks, security vulnerabilities such as copying files with devices such as USB memory are eliminated.

MuniPedia offers detailed logs, so you can see who has reached which data.

With MuniPedia, all units of the Municipality can access files of different formats from a single point. In this way, you can make use of a common platform within the municipality.

Every document created will be added on the current digital archive. Additionally, you will have a sustainable structure as MuniPedia can be easily integrated into the software that is added later.

In addition to your internal affairs, you will be immediately informed about news, critiques and/or complaints about your municipality in social media and press.
