

ORE Agency kicks off its first open energy data service

ORE Agency kicks off its first user-friendly and educational open energy data service on electricity and gas consumption.

ORE Agency, created by all the French electricity and gas operators, is releasing today its first open energy data service.

This dataset enables to take a look at annual electricity and gas consumption in France throughout several territorial areas.

First in Europe, this turnkey data will be improved, very soon, by national-scale production and consumption data collected by the DSOs (Distribution System Operators).

User-friendly, fun and educational, this data service already allows for regional and local authorities, economic players and more broadly the general public to discover, view and download detailed data energy consumption throughout several filters: years, administrative regions, cities, DSOs and activity sectors.

Discover, share and reuse our data on our Open Data website:
<https://opendata.agenceore.fr/pages/home>

This year, ORE Agency will provide new services like:

- Requests for annual energy balances at various levels (by address, area, building) for energy efficiency,
- A single point of contact enabling economic players, regional and local authorities or property managers to make requests to only one stakeholder,
- Providing tools and expertise on energy markets mechanisms for the benefit of the DSOs and market operators.

Faithful to the spirit of its founders, ORE Agency is addressing the new digital challenges of the ecological and socially sustainable energy transition and the associated statutory requirements.

About ORE Agency

ORE Agency (*Opérateurs de Réseaux d'Énergie* – Energy Grid Operators) is an association which gathers all the French electricity and gas distribution operators. Its 15 founders (ADEeF, ANROC, ELE, Enedis, FNSICAE, GEG, GEREDIS, GRDF, Régaz, Réseau GDS, SPEGNN, SRD, Strasbourg Electricité Réseaux, UNELEG, URM) have joined forces to pool digital resources to smooth the energy transition.
