

Organizations Scale

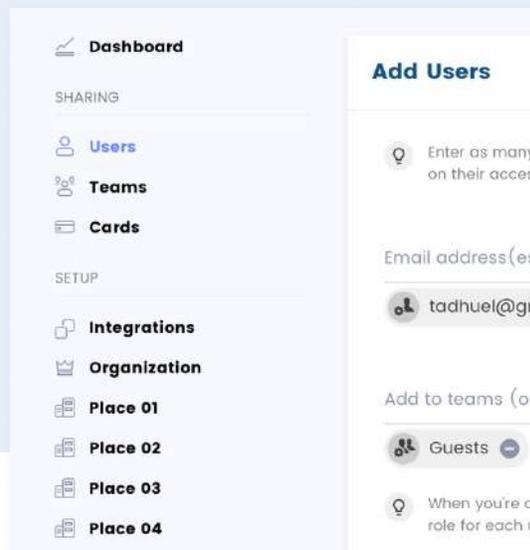

Here's what Organizations can do for your setup:

01

Manage Users Across Multiple Places With One Click

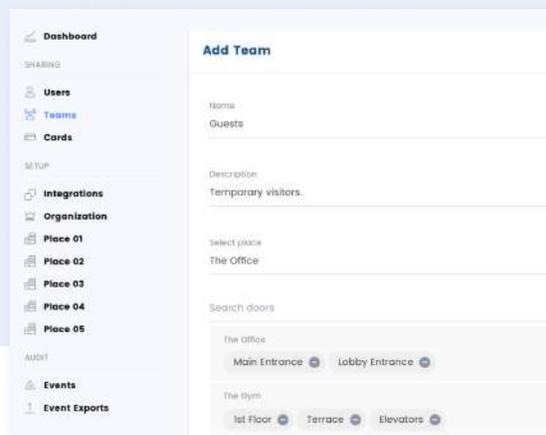

With Organizations you can add and remove users with one click to give them access to multiple places with predefined permissions. You can add users to "teams," which consist of access rights to different places.

02

Set Up Teams

Using Organizations to manage permissions is easy: Simply set up a team, consisting of select access to doors across your entire organization, and manage all permissions globally.

03

Streamline Billing Under One Account

With Organizations you get one invoice for all your places. You can also see all invoices in your dashboard with a detailed view and download receipts.

The screenshot shows a dashboard with a sidebar on the left and a main content area. The sidebar includes a 'Back' button and a section for 'ORGANIZATION SETUP' with menu items: Settings, Branding, Billing, Invoices (highlighted), and Create Place. The main content area is titled 'Invoices' and displays a list of four charges:

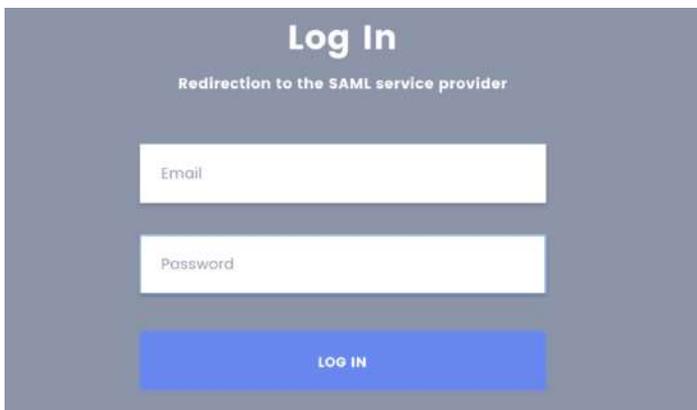

Charge Description	Period	Amount	Status	Actions
\$425 Subscription Charge	Mar 10, 2019 - Apr 10, 2019	\$325 remaining	Payment failed	View Details, Download, Pay, View Receipt
\$200 Non-Recurring Charge	Mar 15, 2019		Paid	View Details, Download, Pay, View Receipt
\$425 Subscription Charge	Feb 10, 2019 - Mar 10, 2019		Paid	View Details, Download, Pay, View Receipt
\$400 Subscription Charge	Jan 10, 2019 - Feb 10, 2019		Paid	View Details, Download, Pay, View Receipt

Single Sign-On (SSO) for Your Doors

Looking for the tech specs? Skip to page two —otherwise here's what SSO can do for your doors:

What is single sign-on (SSO)?

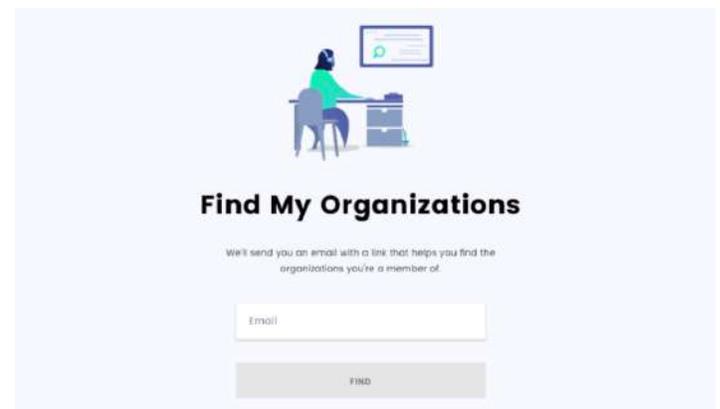

SSO is a service that allows you to use one username and password to log in to multiple applications at once. Your IT department typically sets this up for your organization. Using a Google account, for example, you can navigate between Gmail, G-Suite and any other Google app without having to re-enter your credentials every time.

A screenshot of a login page with a dark grey background. At the top, it says "Log In" in white, followed by "Redirection to the SAML service provider" in a smaller font. Below this are two white input fields: the first is labeled "Email" and the second is labeled "Password". At the bottom is a blue button with the text "LOG IN" in white.

What is single sign-on for office doors?

Kisi will soon integrate with SSO providers to allow your company login to be used for the Kisi app. That way the end user won't need to create a new login to use Kisi.

A screenshot of a "Find My Organizations" page with a light blue background. At the top, there is an illustration of a person sitting at a desk with a computer. Below the illustration, the text reads "Find My Organizations" in bold, followed by "We'll send you an email with a link that helps you find the organizations you're a member of." Below this text are two input fields: the first is labeled "Email" and the second is a grey button labeled "FIND".

Kisi SSO—Tech Specs

Kisi's SSO will work for Okta, OneLogin and any other SAML 2.0-based SSO provider.

How will it work?

- This new feature will add Kisi to the list of cloud-based apps and services that are accessible with just one set of credentials.
- Users won't need to create a new username and password to open doors with Kisi. They'll automatically be signed in to Kisi with their existing cloud account — whether it is Google, Microsoft, Amazon, etc.
- The user provides a SSO URL and X.509 certification and we'll get it set up for you.

What are the advantages?

- SSO standards will make your doors even more secure in terms of software.
- Putting Kisi under your SSO umbrella will streamline an otherwise tedious process — saving time and energy spent onboarding new members with your access control protocol. In short, your IT manager will spend less time issuing physical keys and will have more flexibility in remotely granting or revoking access.
- Admins have total control of security settings (like passwords and access tokens) to your office even if employees use their private devices to access the office.

FAQ

[Can it be used in hybrid environments with people who don't have an SSO account with the company \(e.g. contractors or freelancers\)?](#)

We will offer manual sign in and registration as well, so that members at every level of technical proficiency can be set up to access the space.

[Does the integration support 2FA \(two-factor authentication\) push on mobile?](#)

Yes. You can set up several levels of authentication if your members are using a mobile phone for access.

[Does it include provisioning and de-provisioning via SCIM?](#)

Not initially, but we'll release that as the next feature after the launch.

[How can I switch?](#)

Contact your Kisi sales rep and ask about the "Kisi Organizations" plan, which includes Single Sign-On.
