

RTLS In Motion for Senior Care

RTLS In Motion provides a safe and secure environment for your residents, and allows full tracking and operational visibility.

RTLS In Motion is a wireless nurse call system with Real-Time Location Tracking, providing GPS-like tracking throughout your senior care community. Our system is a powerful resource that helps communities improve care delivery, resident and staff safety, and operational performance. The wireless nurse call feature provides staff and residents access to help from anywhere on campus, by having the help button on their person. The mobile app allows staff to stay connected while away from the nurse station. From a mobile device, staff are able to receive nurse call alerts, search for residents and staff, find equipment and view up to date maintenance and cleanliness status. Administration can use our reporting features to set operational goals, and share level of care reports with resident families during conferences.

RTLS In Motion

Advanced Wireless Nurse Call System

RTLS In Motion uses wearable nurse call pendants and staff duress tags that are always within reach. Our system instantly provides the exact location of residents and staff, as well as the time and location of any call. By giving residents a wireless pendant, RTLS In Motion greatly increases the nurse call coverage within any community.

Location Tracking With Extreme Accuracy

Instantly locate any resident, staff, or item by viewing the easy to read RTLS Map. Our system automatically records the location history of staff, residents, and equipment. The extremely accurate locating feature helps staff quickly find people and items, and allows administration to gain accurate operational performance metrics.

Resident Elopement & Wander Alert

Each community can set-up customizable rules to alert staff before residents have the opportunity to enter a potentially harmful situation. Examples include entering a wrong room, lingering at exit doors, entering stairwells, becoming mobile without a walker, long periods without resident movement or activity, or leaving a bed in the middle of the night.

Equipment Tracking

Using wireless equipment tracking tags, communities can track equipment location, usage, maintenance, and cleanliness. From the convenience of a mobile device or nurse station, staff can quickly find equipment, and view its maintenance and cleanliness status. Additionally, management can track equipment usage through our reporting system to determine if inventory level adjustments are required.

Optimized for Mobile Devices

RTLS In Motion supports an extensive list of mobile devices (smart-phones, tablets, VOIP phones, pagers, etc), allowing staff to be connected while on the go. From anywhere on campus, staff can use the mobile app to search for people, and equipment, while never missing an alert.

Management Tools and Reporting

RTLS In Motion automatically collects location, movement, work-flow, and event data, of residents, staff and equipment. Administrators can now see exactly what happens in their facilities, and make informed decisions based on accurate metrics and events.
