

DIAGNOSTIC IMAGING DESKS

SIT OR STAND WITH EASE

Diagnostic Imaging Desks come fully outfitted to create a comfortable and effective workstation for technicians and radiologists. Ordering is simple-select the overall size you need to fit your room and technology application. Tables come complete with keyboard platform, CPU holder, monitor mounts and cable management devices. This table fits in small spaces but will accommodate a lot of hardware.

Simply push a button to raise or lower the worksurface to a desired seated or standing position. Motorized lifts are quiet, energy-efficient and adjust to your ideal working height. Your table surface travels up to 38mm per second from its lowest position of 24" up to 50" for stand-up work.

This 48" wide diagnostic workstation can accommodate up to three monitors and one CPU holder. Your diagnostic workstation includes a lateral cable tray and moveable cable carriers that are flexible chains that adjust with changes in table height.

Pull out the retractable keyboard platform to comfortably position your input devices. A retractable CPU holder mounts your hardware. Monitor arms securely mount and display your screens. Plug in the electric lift mechanism and you are ready to go!

SPECS AT-A-GLANCE

- Workstation widths : 48", 60", 72", and 84"
- Workstation depth : 36"
- Electronic lifting columns with digital control pad activation
- Travel range : 25" – 51"
