

CHECK POINT + RESTOREPOINT OUTAGE PREVENTION, COMPLIANCE AND CHANGE MANAGEMENT

Benefits

- Reduces network management time and costs
- Reduces the risk associated with extended network outages
- Automates network configuration backup for over 60 vendors
- Recover from hardware failures or bad changes using one-click recovery
- Automates bulk network change management
- Drastically reduces network auditing time
- Enables continuous compliance monitoring and configuration change detection
- Secures access to sensitive network configuration information with encryption and role based administration
- Incorporates a wide range of ad-hoc and scheduled reports
- JSON API for integration with other monitoring, reporting and SIEM platforms

INSIGHTS

Network outages can be enormously disruptive, impacting on daily operations, profitability and business reputation. Human error, individual network device failure and increasingly sophisticated cybercriminals, as well as the highly complex and dynamic nature of modern infrastructures, mean that network integrity is under increasing pressure.

To overcome these challenges you need a centralized and automated means of managing your multi-vendor network devices. By centralizing labour intensive tasks such as network configuration backup and compliance checks you can gain complete visibility of your network's health and be ready to recover from an outage, minimizing downtime and associated costs.

RESTOREPOINT SOLUTION

Restorepoint is a network and security automation platform, which provides protection, compliance and remote management for multi-vendor network infrastructures. It incorporates three key elements: multi-vendor configuration backup, compliance analysis and task automation, delivering a unified, automated, fully compliant, documented and backed-up network infrastructure.

Most companies still rely on traditional scripting techniques or manual process to manage the backup, storage and documentation of their network. This requires considerable time and expertise to maintain and test regularly, often resulting in extended downtime because companies aren't aware their processes are out of date or not functioning correctly. Restorepoint supports over 60 vendors, and can be protecting your network from extended outages in minutes. With its simple one-click recovery process, you can restore normal service in seconds.

Restorepoint's compliance engine provides you with continual visibility of compliance status by automatically detecting changes in configuration, and assessing your devices' compliance without intrusive network scans. Restorepoint analyzes device configurations and performs device status checks at the point of backup, minimizing the time it would normally take to audit the network manually.

RESTOREPOINT SOLUTION

By leveraging the configuration data already held in stored configuration backups against your compliance policies, you can be alerted when a device violates your policy or no longer meets approved baselines. Restorepoint can also be used to track network inventory using the in-built asset management database instead of through cumbersome spreadsheets.

Network management costs can be further reduced by using Restorepoint to automate bulk changes, or to provision new devices using configuration templates. Users can easily send commands or push more complex changes to multiple devices, or schedule future changes to be run at a later date or on a repeating schedule.

Deployed as a physical or virtual appliance, Restorepoint centralizes configuration backup, provides rapid, one-click recovery, automates compliance management, asset and remote management for devices from over 60 network, security and storage vendors.

OUR JOINT SOLUTION

By partnering with the leading provider of network security solutions, Restorepoint has full support for all Check Point solutions, providing automated backup and recovery, eliminating the need to either manually backup devices or customize in-house scripting.

By allowing single-click recovery for Check Point solutions, Restorepoint helps organizations minimize recovery downtime. It also collects asset information from all Check Point devices, including the product Certificate Key (CK), license information, product model, serial number, software major and minor version, and more.

ABOUT CHECK POINT

Check Point Software Technologies (www.checkpoint.com) is the largest network cyber security vendor globally, providing industry-leading solutions and protecting customers from cyberattacks with an unmatched catch rate of malware and other types of threats. Check Point offers a complete security architecture defending enterprises – from networks to mobile devices – in addition to the most comprehensive and intuitive security management. Check Point protects over 100,000 organizations of all sizes.

ABOUT RESTOREPOINT

Restorepoint's mission is to help organizations reduce cost and improve security by automating time-consuming and often complex processes across multi-vendor technologies. Restorepoint's solutions help customers around the world to reduce risk, simplify management, and continually demonstrate that they meet their security and compliance requirements.
