

IT'S ALIVE! OR IS IT?

How do we know if something is alive? Let's investigate! Living things need air, water, and food to survive. They also grow and reproduce. Some helpful questions to ask to figure out if something is living or non living are:

- Does it need air, water and food?
- Does it grow?
- Does it change over time?

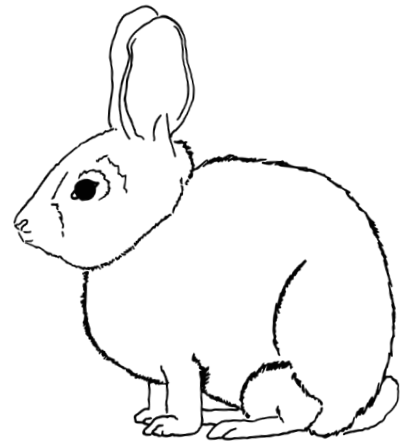

Color in the pictures below. Which of the pictures do you think are of living things? Draw a circle around the living things.

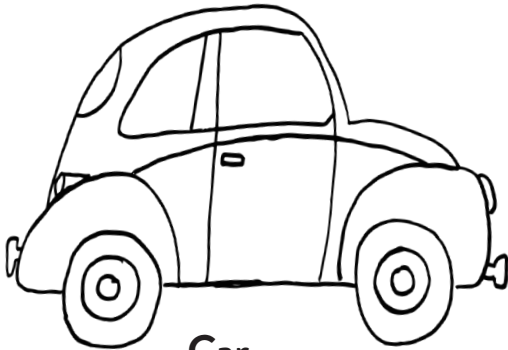

Cactus

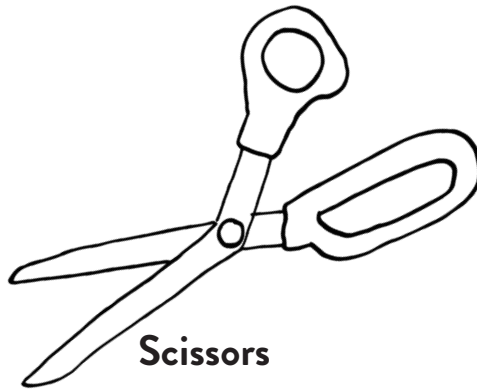

Rock

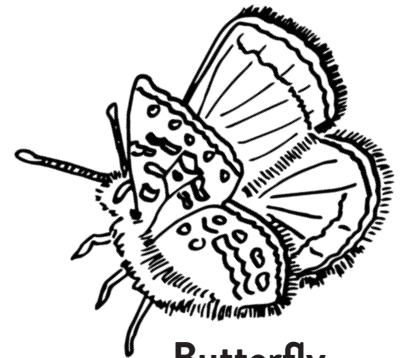

Rabbit

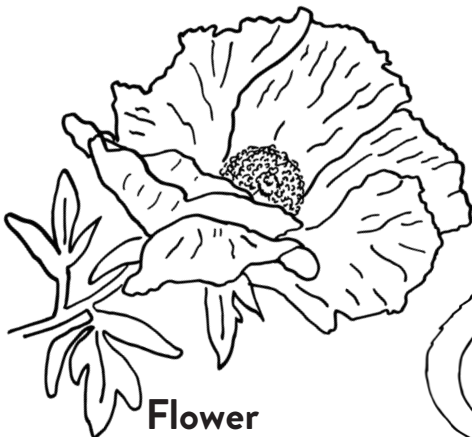

Car

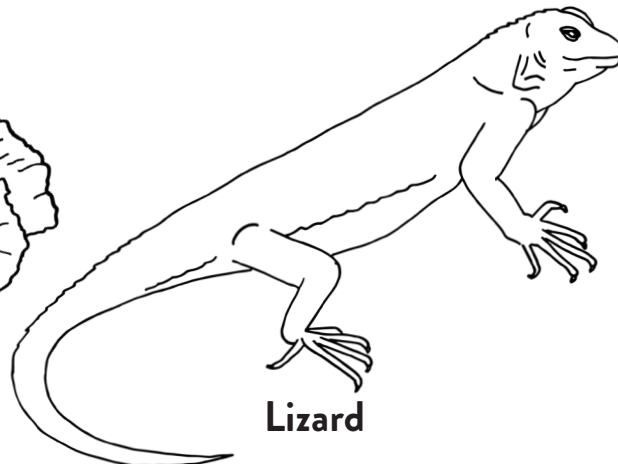

Scissors

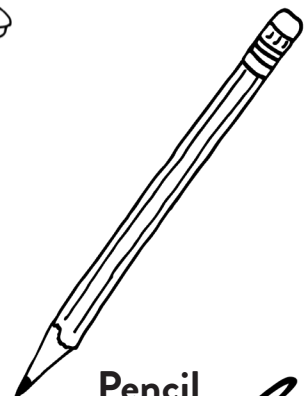

Butterfly

Flower

Lizard
