

Project Fact Sheet

About Us

Rate3 is a platform that bridges enterprises to the blockchain through cross-chain asset tokenization and identity management.

Founder	Jake Goh
Founded	December 2016
Headquarters	Singapore
ICO Funding	25,000 ETH
ICO Period	16 April - 22 May, 2018
Token Ticker	RTE
Total Tokens	1,000,000,000 RTE
Token Type	ERC20
Exchanges	Bibox, Hadax, Fcoin, Coinrail, Dex.top, IDEX, DDEX, Bitforex, Abcc
Media Contact	official@rate3.network

Project Description

Rate3 Introduction

Rate3 is a framework protocol that handles asset-tokenization and identity management. It serves to help bridge enterprises and their users with the public Stellar and Ethereum blockchain networks, allowing users to enjoy fast, low-cost transactions as well as reusable digital identities for the digital future.

Rate3's tokenization protocol uses a combination of trusts, custodian accounts and legally-enforceable smart contracts to guarantee legally-recognized ownership rights and to specify how trustees manage assets. Our identity management protocol lays out a standardized identity framework that allows each user to create and manage a unified cross-chain identity for businesses and other entities to leverage upon. Users can link multiple different Stellar and Ethereum blockchain wallet addresses to their identity. This cross-chain architecture allows assets to be issued on both blockchain networks.

Strategic partners of Rate3 include PayPal and IOST. The deep collaboration with PayPal allows both PayPal and Rate3 to collaborate on issues around product, compliance, operations and global adoption, while the partnership with IOST and Bluehill helps accelerate technical and product development.

Prominent investors that Rate3 has includes Matrix Partners China, Node Capital, Fenbushi Capital, FBG Capital, Kenetic, Nirvana Capital, Hash Capital, among many others.

Jake Goh

CEO, CO-FOUNDER

Profile

Prior to co-founding Rate, Jake was involved in venture capital and led growth at other startups. He is deeply passionate about technology and entrepreneurship, having delivered numerous blockchain keynote presentations across the Asia-Pacific region. Jake obtained his undergraduate degree in both Economics and Technopreneurship from the National University of Singapore.

Boilerplate

Rate3 is a framework protocol that handles asset-tokenization and identity management. It serves to help bridge enterprises and their users with the public Stellar and Ethereum blockchain networks, allowing users to enjoy fast, low-cost transactions as well as reusable digital identities for the digital future.
