

Linking two or more Flat Tanks

Easily extend the volume of waste you capture by using our linking kit to connect two or more tanks together.

Valid for: all Flat Tank variants since January 2015. TT3, TT500, TT750 & TT1000.

Flexibility - you choose...

With options to link tanks **side-by-side** or **nose-to-tail**, two easily accessible ports at each end of the tank allow simple connection from one tank to another... and so on... to give even greater flexibility on site.

Note: To convert tanks back into standalone versions simply empty the contents, remove the link pipe and fit the 50mm dust caps to the tank adaptors.

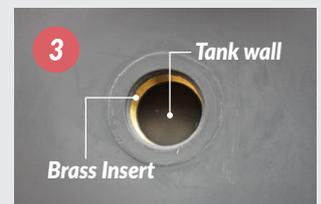

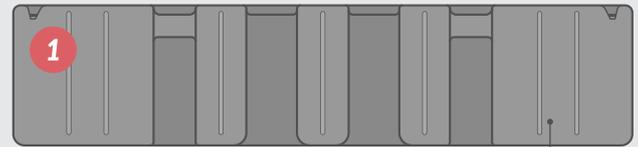

Flat Tank Linking Instructions

TT3, TT500, TT750 & TT1000

- 1** Lay tank flat and ensure it is **empty**. You will be making a hole through the skin of the tank!
- 2** To convert each tank, **remove the red caps** to reveal the **52mm brass inserts** (2 at each end).
- 3** Visualise how you want the linking kit to work and select the **appropriate inserts** you wish to convert (either for side-by-side or nose-to-tail linking).

NOTE: The grey plastic exposed once red cap is removed is the wall of the tank and will need to be holed (drilled out) to allow the tank contents to flow through.
- 4** Use a **51mm hole saw** to **drill through** the centre of the port, **inside** the brass threaded insert.
- 5** **Screw the 50mm male threaded tank adaptor** into the brass insert. For best results use **PTFE tape** to create a **watertight seal**.
- 6** **Connect the linking pipe.**

NOTE: When tanks are not linked, seal the holes using the 50mm dust caps, ensuring that the locking rings are folded over securely. Your tank will now work as a standalone tank.

Additional Notes

- Always ensure tank is **empty** before carrying out any conversion work
- Multiple tanks can be linked to create the waste volume you need e.g. 3 side-by-side link kits will link 4 tanks
- Linked tanks must be at the same ground level
- Tanks must not be stacked with contents onboard
- Custom hose lengths are available - **call for details**
