

Empower Your Students

Safety for Students is a **Free** program that allows you to equip your students and your schools with the safety resources needed to create a network than can truly improve school safety. Since communication is critical, all of the safety features offered in the Safety for Students program are centered around two-way safety communication groups to ensure that students, staff, and first responders are always connected.

Safe2SpeakUP App

Safe2SpeakUP gives students what they need to play an active role in safety while preserving their integrity by restricting their access to only school-related groups.

Bully & Tips Reporting

Students see and hear more than staff, so they need the ability to say something when they see something. Students are able to anonymously report any bully-related activity or safety risk right from their app or a webform. These safety reports are customizable to meet your specific safety needs.

Accounting for Students

If an emergency occurs and students need to escape danger, you still need to be able to account for them. During an emergency, students can have access to CrisisGo's Panic button, which will notify the safety team of their GPS location. Students can also respond to CrisisGo's Check In prompts, which allow them to submit their safety status directly to the safety team for review.

Safety for All School Stakeholders

Alerts and Escalation

When an emergency occurs, you can let everyone know through an organization-wide audible Alert to every device in the building. Alerts can be automatically escalated to first responders to immediately inform them of the situation and include them in your safety communication group.

Safety Reporting

School staff and even parents also have access to CrisisGo's safety Reporting tool via the CrisisGo app or a webform. Every stakeholder can contribute to school safety by reporting any safety risks they see. All the information is recorded, and it can be easily accessed for further review.

Safety Awareness

Safety knowledge is safety power, which is why it is important to strengthen the safety awareness of all stakeholders. CrisisGo's safety awareness system allows you to educate stakeholders about safety risks and solutions, which can lead to increased reporting and improved incident prevention.

Other Program Benefits Include:

- Two-Way Messaging to ensure everyone is connected at all times.
- Drill Monitoring to fulfill safety requirements and test your safety system.
- Dashboard for streamlined management and detailed record keeping.
- Training Center to keep all stakeholders proficient with their safety resources.
- Available on all major devices (Android, iOS, Chromebook, PC, and Mac).
