

United Nation's Sustainable Development Goals

American Resources is a next generation, socially responsible, supplier of raw materials to the new infrastructure market. The products we produce go to produce steel, alloys and metals to support global development and socio-economic progress to create a more efficient economic environment.

As a consolidator of distressed mining assets we have focused on developing the high value assets (metallurgical carbon, specialty alloy stoker, recycled metals and critical elements) while reclaiming the thermal coal mine (used for electricity generation).

At American Resources Corporation, we believe our company has an important role in supporting the United Nation's Sustainable Development Goals through the following three initiatives.

1 NO POVERTY

GOAL 1: NO POVERTY

- Have averaged over 300 direct jobs in economically distressed areas and an estimated 1,500 indirect jobs.
- Brought new industries to a rural distressed region and worked with local contractors to rehabilitate properties for third party organizations to incubate new opportunities.
- Average pay for our staff is 200% above the average minimum wage in the region.
- Worked with third parties to repurpose prior thermal coal properties to create new jobs in the region.

9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

GOAL 2: INDUSTRY, INNOVATION AND INFRASTRUCTURE

- Acquired five companies out of bankruptcy and utilized new age management and technology to restructure the assets to be productive and sustainable for the future.
- Averaged over 300 direct jobs in economic distressed areas
- Produces the highest grades of carbon for the building of the safest building and infrastructure worldwide, under a "build it right, build it once" philosophy
- Innovating new and sustainable ways to capture and process critical elements in an environmentally friendly process.

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

GOAL 3: RESPONSIBLE CONSUMPTION AND PRODUCTION

- Company has been recognized for its safety record by receiving the industries highest safety award.
- Utilize modern low-emission technologies and equipment to reduce environmental impact while reclaiming previously impacted lands for the future.
- Corporate philosophy built around accountability at all levels of the operation.
- Company recycles and reusing outdated or redundant infrastructure and assets.
