

Taking aim at DRAM

Liquid and Intel® Optane™ Technology PCIe Add-in-Card (AIC) solid state drive (SSD) solutions combine the unparalleled high throughput, low latency, quality of service (QoS) and endurance of Intel® Optane™ Technology with Liquid's industry-leading PCIe fabric technology to deliver 2-4x higher capacity and performance. Achieving DRAM memory-like speeds, the Liquid and Intel Optane solution suite is available in capacities of up to 1.50 TB for high-value workloads.

The collaborative design between Liquid and Intel® offers an ultra-thin, standard form factor half-height half-length (HHHL) card that works seamlessly with systems that have existing PCIe slots. A Gen 3.0 x8 PCIe interface enables high-throughput and low-latency transactions. It utilizes the latest NVMe protocol in order to deliver increased performance and efficiency from a single device. The AIC outperforms legacy architectures by delivering 1.6 M IOPS of random performance, over 7 GB/s of throughput and ultra-low transactional latency of <10 μs.

The Liquid solutions also supports Intel® Memory Drive Technology (IMDT) software that extends system memory transparently. IMDT integrates the SSD into the memory subsystem and makes it appear like DRAM to the OS and applications. As a fully transparent memory solution, no changes are required to the OS or applications.
