What is THC?

- THC comes from the marijuana plant
- THC is the most common chemical in the marijuana plant
- Medical users of THC almost never get a buzz (if you do, we adjust things to take it away)
- THC changes signaling in over five brain chemical systems all at the same time!
- Some people get different effects if they inhale THC or if they take THC by mouth
- THC can be very useful for pain and sleep problems
- Side effects of THC are rare and usually not worrisome
- THC is usually best combined with CBD to provide a “team approach” to help your problems

What is medical marijuana?

- there are over 500 chemicals (“terpenes”) in the marijuana plant
- THC and CBD are the two most useful chemicals we get from marijuana
- NYS allows patients to get THC and CBD in the NYS medical marijuana program
- NYS allows liquids, sprays, capsules, and vaporizers (but not flower) in the NYS medical marijuana program
- other means of delivery (lozenges, lotions, etc) are or will be approved soon by NYS

How much does it cost?

- you have to pay cash for medical marijuana in NYS
- we try to keep your monthly cost for medical marijuana under \$200
- we work with you to find the least expensive NYS medical marijuana that will help your problem

What is CBD?

- CBD comes from the marijuana plant and also from hemp plants
- CBD is the second most common chemical in the marijuana plant
- CBD has NO psychoactive effect, there is no “buzz” when you take CBD
- CBD can block the the “buzz” of THC
- CBD works to amplify the effects of your own endocannabinoids (that’s right, your body and brain are making chemicals like THC all the time!)
- CBD can also boost the pain and sleep relief you get with THC
- CBD can be taken by mouth or it can be vaped (inhaled)
- side effects of CBD are rare and usually not bothersome
- CBD can work alone or it can be combined with THC to provide a “team approach” for even better results
