- We monitor dispensary price lists on a regular basis - this saves you money
- We adjust your medical marijuana with a decision analysis algorithm that is constantly updated
- Appointments 3 different ways - in our office, on your smart phone, or on your computer
- Written patient education materials as well as dosing recommendations given at appointments

We will certify you for  
your **NEW YORK STATE**  
Medical Marijuana Card

We will help you dose  
non-psychoactive CBD and  
provide you with the  
**HIGHEST QUALITY CBD**

## WHAT IS THC?

- THC stands for tetrahydrocannabinol - THC for short
- THC comes from the marijuana plant
- THC is a chemical compound extracted to use as medicine
- THC can be taken by mouth as pills or tinctures (drops that go under your tongue)
- THC can be vaporized (and safe for your lungs)
- THC products are purchased at a NYS licensed dispensary

## WHAT CAN THC DO FOR YOU?

- THC can change your brain signaling system to reduce: muscle spasms, pain, stiffness and tremors
- THC can help with sleep problems like insomnia
- THC can reduce nightmares associated with PTSD
- THC can reduce hypervigilance and social anxiety
- THC can stimulate appetite in cancer patients
- THC works better when used with CBD (see below)
- THC side effects are rare and usually not worrisome
- THC can work safely with patients with a history of addiction
- THC reduces nausea associated with chemotherapy by decreasing gastrointestinal inflammation
- THC reduces inflammation associated with cancer treatments
- THC stabilizes acetylcholine, serotonin and dopamine levels in your brain to stabilize your mood

## WHAT IS CBD?

- CBD stands for Cannabidiol - CBD for short
- CBD comes from either a marijuana or hemp plant
- CBD extracted from Hemp has no THC in it
- CBD hemp derived is legal in all 50 states
- CBD can be taken by mouth as in pills or tinctures (drops that go under your tongue)
- CBD can be vaporized (and safe for your lungs)

## WHAT CAN CBD DO FOR YOU?

- CBD is a strong anti-inflammatory supplement and can reduce pain associated with autoimmune disorders and arthritis
- CBD reduces anxiety, depression and PTSD symptoms
- CBD is a mood stabilizer
- CBD helps athletes and physical therapy patients recover faster
- CBD helps brain injury patients with increased attention
- CBD boost the effects of THC making it work better and stronger
- CBD blocks the "buzz" of THC
- CBD side effects are rare and not worrisome
- CBD can be used alone or it can be combined with THC to give you even better results
- CBD decreases anxiety, depression, anger, agitation and stabilizes your mood by balancing serotonin which may

- reduce feelings of hopelessness, sadness, powerlessness and guilt
- CBD is an anti-inflammatory supplement that protects your nerves and reduces neuropathy pain
- CBD supports your nervous system by supporting neural cells of the mitochondria
- CBD decreases muscle spasms, and may be cytotoxic and anti-proliferative against new cancer cell growth
- CBD improves your bone health
- CBD promotes restful sleep
- CBD is cardio-protective - it decreases myocardial dysfunction by decreasing fibrosis, inflammation and cell death
- CBD reduces PTSD symptoms such as hypervigilance and nightmares by filling in the space where there is not enough Anandamide - our bliss molecule
