

Drum Insulated Jackets

Argus Heating design, manufacture and distribute a range of IBC and drum heaters and accessories. Drum insulated jackets can be used in conjunction with many of the drum heaters in our range.

The jackets wrap easily around the drum and are held together with a velcro strip. They come with a built-in insulated lid that allows easy access for filling/dispensing. When used with the drum base heater or a flexible silicone drum heater, the jacket will reduce the heat up time and increase the top range temperature attainable. The jacket can be fitted after the drum is heated and will maintain the product temperature for an increased period of time.

Applications

- Reduces heat loss or improves efficiency when used in conjunction with a heater.
- Speeds up the time needed to heat the product to temperature.
- Allows the product to reach a higher top temperature.

Features

- The polyurethane nylon fabric jacket is flame retardant and water resistant.
- Superior needled polyester insulation ensures heat is retained inside the drum.
- Designed to suit 200 litre metal or plastic drums.
- The drum insulated jacket can be used with a flexible silicone drum heater or a base heater.

Left: Insulated jacket (colour may vary). Centre: Optional drum base heater. Right: Access for filling/dispensing.

Other products in the range.

Construction

- Polyurethane nylon fabric with velcro strip.
