

# idGenius Collaborate

Trusted Third Party Identity Management for the Extended Enterprise

## idGenius Collaborate empowers you to manage third-party risk in a decentralized world

### PRODUCT DESCRIPTION

---

idGenius Collaborate (patent-pending) extends the enterprise security envelop to mitigate third-party risks effectively. The increasing reliance on third-party supply chain and non-employee human resources have exposed organizations to greater security risks. idGenius Collaborate enables organizations to leverage the economy and flexibility of third-party resourcing without compromising security. The platform is built for flexibility to model the right business processes to adequately verify, engage, change, disengage and reengage third-party non-employee resources to deliver short-term and long-term services in line with corporate and government best practices.

### PRODUCT HIGHLIGHTS

---

#### **Standardized business processes reduce Third Party risks**

Unlike the well controlled lifecycle of an employee, third-party non-employees such as contractors, contingent workers and freelancers are more transient. As such, conventional resource engagement and disengagement processes are not as simple for non-employee third parties.

Recent surveys shows a high percentage of workers continue to have access to sensitive corporate data after they are no longer engaged. This exposes the enterprise to considerable risks of insider threats, data leaks, and non-compliance to data-privacy regulations.

The idGenius Collaborate solution enables enterprises and Third Party vendors to standardize the business processes associated with managing the third-party non-employee lifecycle events such as engage, change, disengage, and reengage.

idGenius enables standardized business processes that not only manage the identity lifecycle, but do so with the appropriate security, risk and compliance guardrails.

## **Single authoritative trusted identity source**

A modern enterprise is replete with disparate systems and applications required for access by third parties. The disparity results in non-employee access information such as identity and credentials to spread across various pockets within the enterprise data ecosystem which makes it difficult to manage such data. Non-centralized or distributed identity data increase risk to managing the identity lifecycle events.

## **Secure third-party collaboration capabilities reduce enterprise risk**

Managing third-party engagement, authentication, and entitlements for better collaboration with external vendors has proven to be a challenge in hybrid enterprises. The growing shift to mass telecommuting has further added to the complexity.

Remote 'home-networks' are traditionally less secure than on-premise infrastructure. Securing remote access and collaboration outside the corporate firewall adds a new dimension to the already complex third-party access threat landscape. In this context, idGenius Collaborate is a cost-effective option to manage and mitigate third-party risks while collaborating with external vendors and delegates to reduce the overall costs of managing the third-party non-employee lifecycle.

## **Compliance driven customer single sign-up**

idGenius provides a secure and intuitive AI-based self-registration process for any identity that requires verification, vetting and due diligence:

- Customers
- Third Party Non-Employees
- Employees

Manage KYC/AML and KYP mandates effectively while affording an intuitive, frictionless customer experience to gain digital market share.

## **Evidence-based third-party risk management supports compliance efforts**

Regulatory bodies increasingly zone in on third-party risk management. Evidence-based third-party risk management is a critical capability in supporting compliance. Before engaging non-employees, it is essential to verify and qualify their identity and background based on supporting data. The idGenius Collaborate solution offers evidence-based, comprehensive third-party risk management with identity proofing, social media proofing, background check, and project/work history proofing.

## KEY BUSINESS BENEFITS

- Collaboration platform with security controls for third parties
- Holistic third-party data ingestion and transfer to external systems
- Single authoritative data source for non-employee identities
- AI-based Self-Registration and Customer Single Sign Up
- Zero trust risk model to engage and disengage identities and assets
- Configurable workflows to model, automate, and optimize business processes
- Configurable notifications, approvals and escalation
- Easy to build, wizard-driven user form creation
- Secure and intuitive self-registration process

## THE UNIQUE POWER OF idGenius COLLABORATE

---

The current state of Third Party Risk Management is filled with blind spots in business processes and technology. The idGenius Collaborate solution provides AI-driven identity and risk management capabilities tailored to the unique challenges associated with operating in an extended environment. The holistic platform enables organizations, in collaboration with vendors, partners, and agencies to effectively manage and ultimately reduce third-party risks. Enterprises can achieve better, more reliable and secure business outcomes by leveraging the platform's configurable workflows to standardize non-employee engagement and disengagement processes.

## ABOUT ANOMALIX

Anomalix is a Gartner-recognized solutions and services company for Identity and Access Management. Anomalix creates solutions that enable enterprises to establish an omnichannel view of identity information that enhances security administration, improves sales and marketing campaigns, and simplifies governance compliance and reporting. Anomalix's access management solutions provide managed identity services tailored to managing employees and third parties and are helping organizations across numerous industries reduce security risk.
