

We're looking for a

Full Stack .NET Developer

In a nutshell:

BSOLVE is looking for a Full Stack .NET Developer to form part of a development team which builds, automates and connects robust and scalable custom applications as part of our mission to support migration to a serverless world.

1. The job

We need a motivated .NET Full Stack Dev to work as a consultant within a team of developers who are responsible for designing, building/integrating, testing and deploying code using .NET, Angular and Azure technologies.

You should be able to work agile and cross-functionally coordinate with your fellow team members and clients to deliver and maintain systems.

At BSOLVE, we're all about constant learning and innovation. The best idea wins, regardless of seniority. Taking initiative is strongly encouraged and we constantly review our internal processes, tools, methodologies and tech stacks. We're proud of delivering the best possible software solutions to real-world business problems.

1.1. Responsibilities

You'll be reporting to the Development Team Lead and your responsibilities will primarily be to:

- Contribute to the design and architecture of solutions.
- Prepare and review estimates for development effort.
- Work within the development team to deliver robust and scalable solutions.
- Maintain and support future and existing solutions.

1.2. Skills and technology experience

1.2.1. Skills

- A relevant tertiary IT degree/diploma or equivalent.
- At least 5 years development experience with .NET (C#).
- At least 5 years development experience with TSQL and relational databases.
- In-depth understanding of the entire software development process (design, development, testing and deployment).
- Understanding of layout aesthetics, passionate about clean and efficient user interfaces.
- Excellent analytical and problem solving skills.
- Experience with building responsive and cross-browser web applications.
- Experience with RESTful and API service integration.
- Experience with Microsoft Office 365 and Azure.
- Solid understanding of version control principles, TFS and GIT.
- Experience with Agile/Scrum development methodologies.
- Image element processing and workflow.
- Excellent written and verbal communication skills.

1.2.2. Tools and technologies

- HTML5
- CSS3
- JavaScript (jQuery and Knockout.JS)
- Angular
- .NET and .NET Core (C#)
- Entity Framework
- Microsoft SQL Server
- IIS
- Microsoft Azure
- Microsoft Azure DevOps

- Microsoft Office 365
- Visual Studio and Visual Studio Code

Advantageous

- Microsoft SharePoint
- Unit Testing

2. About BSOLVE

- We move organisations into the cloud. Our mission is to design, implement and support migration to a serverless world.
- BSOLVE is remote only. We work from home and our clients are not constrained by borders (but are mostly close to the GMT+2 timezone).
- We prefer team members to be in the same timezone to enable social events and discussions to take place at comfortable times. Having a healthy work/life balance is important to us.
- You'll get all the equipment you need to be productive from wherever you are.
- We have a [manifesto](#). If you agree with one (or more) of the points in it, telling us why in your comms will help put you on the shortlist.
- We have an all-hands meeting each morning to kick off the day's work.
- We're an eclectic bunch of personalities with banter to match.
- We're proud of what we deliver to our clients.

3. Remuneration

Individuals vary hugely in their abilities. What we're willing to pay for your services depends on how much value you're able to add to our mission.
