

Total Syntheses of Dibromophakellstatin and Dibromoagelaspongin

Feldman, K.S.; Skoumbourdis, A. P.; *Org. Lett.* **2005**, 7, 929–931.

Feldman, K. S.; Fodor, M. D.; *J. Am. Chem. Soc.* **2008**, 130, 14964–14965.

imidazole

1–6

7–8

- 1) $\text{Me}_2\text{NSO}_2\text{Cl}$
- 2) *n*-BuLi then PhSPh
- 3) *n*-BuLi then 3-chloro-1-iodopropane
- 4) potassium phthalimide
- 5) HBr
- 6) **1**, Na_2CO_3

- 1** R = H
- 2** R = SEM

- 7) $\text{PhI}(\text{CN})\text{OTf}$, $\text{EtN}(\textit{i}\text{-Pr})_2$
- 8) CAN, H_2O

hint for Step 5: Global deprotection

Step 7: Name the reagent and propose a mechanism?

Classify the type of stereoselectivity you would expect to observe? How do the products relate to one another?

9–12

13–18

dibromoagelaspongin

- 9) $\text{H}_2\text{N}-\text{NH}_2$
- 10) **2**, Na_2CO_3
- 11) Tf_2O , 2,6-lutidine
- 12) TBAF

- 13) NCS
- 14) HCl , MeOH , $80\text{ }^\circ\text{C}$
- 15) *m*-CPBA (1 equiv)
- 16) TMSN_3 , ZnI_2
- 17) H_2 , Pd/C then TFA
- 18) H_2O , $90\text{ }^\circ\text{C}$

Step 11: Propose a mechanism

Step 13: Propose a mechanism
for the cyclization
hint for Step 14: Two transformations occur
