

Bring Shadow IT INTO THE LIGHT

We are here to turn Shadow IT into a controlled, compliant, and cost-effective application development process.

By using **Agility IT Services** to assist with your custom applications development backlog you gain incredible efficiencies with substantial cost savings:

For Business Unit

- **Empower** by gaining staggering agility benefits. No more backlog and no more waiting! Continue to provide value to the organization.
- **Save time** and money by increasing service delivery levels without additional resources at a fraction of the cost.
- **Make money!** Time to market is imperative for any organization. Get that application completed and released ASAP. Drive revenue, enhance customer experiences, and improve internal processes.

For Central IT

- **Stay secure/compliant** utilizing the latest security technologies eliminating coding vulnerabilities ensuring compliance across your entire portfolio.
- **Maintain control** of a very large application portfolio. Release schedule becomes predictable. Pressure is taken off the internal Applications Development team.
- **Integrate best practices** and drive DevOps education and impart/monitor development practices.

Growth of Shadow IT

Do you know how big the problem is and how fast it's growing? Most Shadow IT projects will eventually be thrown over the fence back to Central IT who's ultimately responsible. What can go wrong....
- privacy violations, technical debt, data compliance issues, compliance gaps, breach of contract, security violations, etc.
