AMPLIFIER ADAPTATION

It is recommended to start wearing your new amplifier 1 – 2 hours per day within the home. Engaging in regular conversation, watching TV or performing household tasks will help in the acclimation of your hearing amplifier. It is common to not notice much of a difference within the first week.

Introduce your hearing amplifier to quite outdoor environments such as a park or open space. As your ears get used to the device, extend the hearing amplifier use to 3-4 hours per day. You may notice that you start hearing sounds you previously were not able to.

Regular and outdoor conversations should now be tolerated. Try bringing your hearing amplifier with you to a restaurant or work. Extend daily use to 5-6 hours per day but don't over do it as you are still getting used to the device.

Now is the time to start enjoying all the sounds of the world again. Try your hearing amplifier in any environment as you should now be well acclimated to the amplification.

TROUBLESHOOTING

Why can I hear a Whistle Sound when I use the amplifier?

This may be due to the Ear dome not being fully seated in the ear canal. Turn down volume on the Amplifier and fully insert the Ear Dome as to not allow any space between the dome and the ear canal. Once inserted you may increase the volume.

What should I do if I hear no Sound?

The Battery may be not functioning or properly seated. Try replacing the battery, after that adjusting the volume and modes may help verify if the unit is receiving power. If you suspect that Amplifier is not powering on with a fresh battery then it may be defective and a replacement will be sent. If the Unit is receiving power but you cannot hear amplification please replace / clean the ear dome as an occlusion will block sound from omitting.

My Amplifier works, but the sound is very low.

Replace the battery with a fresh one. Make sure the device is clean, dry and that the ear dome is free of any occlusions.

The Battery tray is very hard to open.

The Battery tray is designed with a very tight fit. This ensures that the Battery maintains a good solid connection which allows uninterrupted use. A fingernail or hard edge can help leverage the tray open.

BATTERY SPECS

BHA-603 Battery: 10 Zinc Air
