

CONSTRUCTION NOTICE

On November 27th and 28th the Village's contractor will be making final connections to the newly constructed water main associated with the Illinois Route 31 and Main Street Improvement Project. During this time, you may experience water pressure fluctuations and discolored water. Discoloration of water may occur due to redirecting the flow of water, which disturbs iron sediments in the water main. While there may be a discoloration of water, the water is safe to drink. Water discoloration will only be temporary. It is strongly advised that doing laundry on these days be avoided as iron sediments in the water can stain clothing.

Should you have any questions or concerns, please contact the Water Superintendent, Dean Gorter at 847-551-3492.
