Wingman Operators

Operators that have successfully been certified as Wingman operators have demonstrated a commitment to the rigorous aviation operations and maintenance requirements of The Wingman Standard™. Each Wingman operator maintains a strict safety program, which Wyvern audits every 24 months, and performs data maintenance which is continuously monitored throughout the audit term by Wyvern staff. Onsite audits ensure that the air carrier's operations and maintenance practices continue to adhere to and to uphold The Wingman Standard. The requirements of The Wingman Standard have been developed, and are maintained in conjunction with, the most sophisticated and demanding safety and risk assessment departments in the world. Wyvern subscribers may use the PASS (Pilot & Aircraft Safety Survey) system to generate a PASS report each time they book a charter flight to verify that the trip meets the safety requirements of The Wingman Standard.

Registered Operators

Registered Operators supply data and documentation which enables Wyvern to verify specific safety information regarding the operator, aircraft and crew for a given trip. Registered Operators **do not** undergo a Wyvern on-site audit. Wyvern subscribers may use the PASS (Pilot & Aircraft Safety Survey) system to generate a PASS Report each time they book a charter flight to verify that the trip meets their safety requirements. For example, the pilot check verifies that the assigned pilot is fully certificated, properly type-rated, has met flight time requirements and has current medical and training records. Operator-level checks confirm that the operator has a valid AOC on file, the aircraft is registered and sufficient aircraft insurance is in place.

About Wyvern

Wyvern Consulting, Ltd. is an aviation safety and risk assessment company. Since 1991, Wyvern has been a global leader in providing data and auditing services with the single-minded purpose of elevating safety, worldwide. Corporate flight departments, travel departments, fractional programs, charter brokers, operators and discriminating travelers choose Wyvern as their primary source of aviation safety data. The company specializes in collecting and providing charter industry intelligence and performing desktop and onsite audits of charter operations and maintenance practices. Operators are audited, worldwide, according to industry-accepted audit standards including Best Practices, The Wingman Standard, and IS-BAO criteria as well as custom audit projects. Wyvern Consulting maintains the most comprehensive and accurate database of safety information giving charter buyers real-time access to operator operations specifications, accident and incident data, audit results, insurance documentation and crew qualification data.
