

Are You Breached?

On average, cybercriminals spend 191 days inside a network before being discovered*. We help you reduce this dwell time dramatically by factor of hours or days.

Detect Those Missed

Our compromise assessment(CA) detects what your existing defensive technologies like EPP, EDR, NGFW, IPS, Sandboxing etc have failed to.

Low False Negative

Our approach is based on 'low false negative' by design unlike existing defensive solutions where it's based on 'low false positive' to avoid noise.

~100% Coverage

Unlike traditional threat hunting, we don't rely on sampled data. Instead we proactively scan ALL your endpoints and servers for our analyst to confirm breaches.

Are you already breached?

If your stakeholders were to ask the question "Are we breached?", what would be your answer? Whatever that answer be, how do you know that for certain?

Your Current Investment

Are your investments in existing defensive technologies justified? Are they doing the job they are invested for? Where can you tighten the existing controls and improve?

Your Security Budget

How can you reduce further investments in Cyber Security and instead leverage the existing? Which technologies to get rid of and which one you may want to acquire?

How Do We Conduct It

Our Forensic States Analysis (FSA) model uses a proactive compromise assessment, which is focused on rapid detection of malwares, indicators of compromise, behaviours of compromise and artefacts of unauthorised activity using a proprietary threat hunting platform. After identification of a possible threat, our analysts will make an early assessment of the threat, risks and scope of the intrusion. Armed with this information, we enable organisational leaders to make prompt decisions related to business continuity and level of effort for a response.

What Do We Deliver

A detailed report with specifics of the breaches alongside details of how to mitigate them. Apart from the breaches, the report will also include an inventory of the applications your environment runs categorised by its legitimacy. We can present the report to the clients' executive management too.

Who Are Our Compromise Assessment Clients

- *Region's largest Banks with 2000 to 14000+ Seats*
- *Region's largest retail groups from 2000 to 16000+ Seats*
- *Oil & Gas Companies with 500+ Seats and above*
- *NBFI and Other Verticals*
