

BIOPRESS™ CULTURE PLATES

Flexible bottomed culture plate for use with the Flexcell® Compression System.

- Each well contains a piston and foam sample holder. 3D tissue samples or cell-seeded constructs are compressed between the piston and a stationary platen* using the FX-5000™ Compression System.
- Ring foam holders keep samples confined to central region of each well.
- All plates come pre-sterilized.
- Available individually or in cases of 40 plates.

**Platens are reusable and autoclavable. They are sold separately and as part of the FX-5000™ Compression System.*
