

Make trawling through days of footage a thing of the past with the Sentinel Incident Button. Utilising our top of the range DVR's abilities, combined with our premium software suite, the driver is able to highlight moments of interest at the push of a button.

Within the Refuse Industry it is used to help prove and identify "Missed Bins" and prevent costly re-attendance fees to collect a bin that wasn't present, stopping a dispute in its tracks when you have the video evidence readily available showing that the bin wasn't present at the time of collection.

Other uses include:

- Incident Capturing - If the vehicle is involved in an incident or a moment of interest the driver simply pushes the button and it will create an alert and flag the recording at the precise moment.
- Drop Off Points - To assist in time analysis when your driver drops off the goods, simply press the button and you will be able to collate the data to capture efficiency.

When combined with a Live View or WiFi system, instant or scheduled email alerts and video clips can be sent to you, meaning incidents or moments of interest can quickly be viewed and downloaded without the need to remove the hard drive from the vehicle.
