

Role Description & Person Specification

Role Title	Senior Full Stack Developer
FTE	1.0
Location	Working mainly from home, with regular meetings at our office base in Oxfordshire and occasional travel to customer sites across the UK
Line Manager	CTO
Reports	None
Role Description	<p>We are looking for an experienced Senior Developer to help us bring a range of new applications and products to market, encompassing the full lifecycle, from design through to implementation and support.</p> <p>We're a small, ambitious team who love to solve our customers' business problems through creative ideas and innovative, robust technology. We'll be looking for you to turn our ideas into reality, utilising your excellent coding skills and your understanding of how our applications will work in a real-world setting. You will be adaptable, and able to move quickly between projects and priorities.</p> <p>In this role you'll primarily be working to design and build new applications to bring to market, as well as extending and maintaining our existing production applications and services. In conjunction with this you will help with the evaluation of new technologies to support our aims and roadmap.</p> <p>The technologies we work with are:</p> <ul style="list-style-type: none"> • Git • JavaScript • TypeScript • Node.js • ReST • Vue.js (Vue, Vuex, Vue-Router) • HTML/CSS/SASS (including for responsive design) • MySQL • Elasticsearch, Logstash, Kibana, APM, Beats • Here Maps and Google Maps • Loggly • Bugsnag <p>Our applications and services primarily run on AWS platforms; therefore a solid working knowledge of the following AWS products is a bonus:</p> <ul style="list-style-type: none"> • IAM • Elastic Beanstalk • RDS • EC2 • S3 • Route53 • CloudFront • Lambda • SAM

	<ul style="list-style-type: none"> • CloudFormation <p>You'll be one of the most technical members of our team, so you'll need to be able to communicate effectively with colleagues and clients who may not understand the technical detail.</p> <p>This is a new role, so you'll need to be ready to make it your own, but we expect you will be:</p> <ul style="list-style-type: none"> • Taking high-level, theoretical ideas and translating them into effective technical designs • Writing and de-bugging code to build and testing applications that you've designed, and/or that have been built by other members of our team • Ensuring that our applications are production-ready, including supporting plans for deployment • Considering the user experience, including design and usability • Writing documentation • Providing advice and training to support implementation and use of systems and applications • Recommending solutions and designs to help solve customer problems • Supporting pre-sales activity by providing information on how our applications work, the dependent technologies/infrastructure • Estimating resource effort to design, build and deploy new applications • Coming up with creative ways to solve technical problems, or business problems with technical solutions • Contributing to our technology propositions and plans
Essential Attributes	<p>Degree in technical subject, or equivalent experience</p> <p>Minimum 5-7 years experience of professional coding experience to develop software / applications or other technology solutions</p> <p>Experience in using all/the majority of the technologies listed above</p> <p>Desire to make a significant, pro-active contribution to the growth and development of the business</p> <p>Ability to communicate effectively, in non-technical language when necessary</p> <p>Professional, ambitious approach to self-development and learning</p> <p>Ability to adapt and deal with change, including willingness to get involved in a variety of tasks</p> <p>Willingness to travel to client and/or partner sites (within the UK)</p> <p>Existing and ongoing permission to work in the UK</p>
Desirable Attributes	<p>DevOps experience with Docker, Kubernetes, Jenkins, CircleCI, Terraform or equivalents</p> <p>Experience with some of the following technologies that we are currently exploring to support some future product concepts: GraphQL, Prisma, MongoDB, Vue-Native, Flutter/Dart and ML</p> <p>Experience of working for, or knowledge of technology services within, a professional services or consultancy business</p>

	Experience and/or knowledge of workforce/field service management, enterprise mobility or related industry trends
How to Apply	Please send your CV and a covering email to hello@leadent.digital with the subject line: 'Senior Developer Application'. We'll aim to get back to you within a week, but it may take a bit longer than this if we're particularly busy.
