

Underserved children and their families face overwhelming barriers including financial hardship, lack of transportation, limited clinic hours, difficulty identifying dental providers who can provide preventive and follow up care, and a low number of providers.

Making Oral Health Care Accessible to More Families

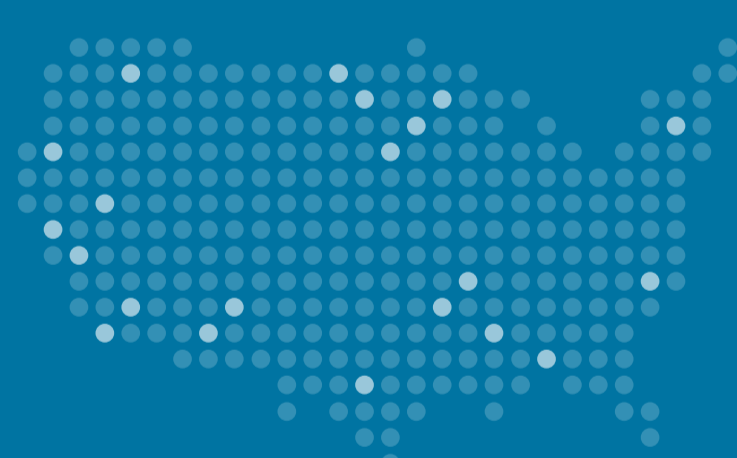

Through the **National Mobile Outreach Initiative**, sponsored by Patterson Dental, America's ToothFairy clinical partners overcome these barriers to care by providing dental services in mobile units, schools and childcare facilities, community centers and other familiar settings. By meeting underserved families where they live, work, learn and play, children who may otherwise have fallen through the cracks receive critical preventive and restorative oral health care.

“With low medical assistance reimbursement and a high number of uninsured patients we would not be able to provide services without your support.”

Sarah Hayes

Director, Children's Dental Health Services, Rochester, MN

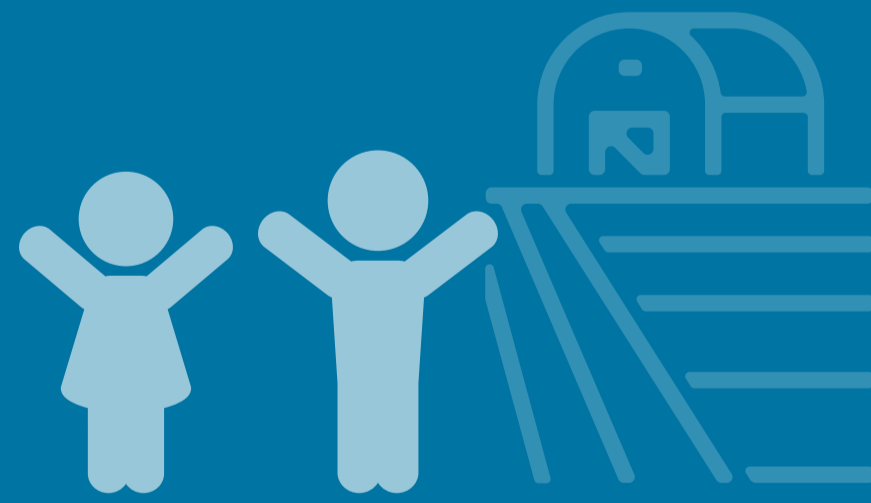

Last year America's ToothFairy provided critical resources and support to **42 mobile dental clinics** across the nation. Through this initiative **152,641 children** received oral health services from our mobile nonprofit dental clinic partners. Of those children:

62% live in communities with
**DENTAL HEALTHCARE
PROFESSIONAL SHORTAGES**

**1 in 3 children had
UNTREATED DECAY**

53% live in
RURAL AREAS

Without the support of our donors and sponsors, these children would likely have missed the opportunity to treat their acute oral health issues, learn about proper dental care and receive preventative treatments.

Thanks to donors like you, these children have a reason to smile again.

This initiative is made possible with support from
