File Types, Resolution & Colour Balance

Jpeg files (*.jpeg/*.jpg). sRGB or Adobe(1998) RGB Profiles. Where possible submit original files and try not to reduce or enlarge the file considerably if editing in advance. Always check your monitor / display isn't excessively bright or contrasted and colour balance is set to normal to get the best indication of the final printed result.

Print 'Bleed' & Cropping

Borderless prints require a 1mm bleed to ensure clean edges. Images are scaled proportionately to fill the print area overlapping by 1mm on each side.

Crucial subject matter and text should be kept clear of the sides to avoid cropping. Example demonstrates a classic 4:3 file with a 2:3 print output ratio. Here the crop needs to be shifted up to avoid trimming subjects heads.

Alternatively choose the no crop feature. Your file will be fitted to the print size leaving white strips on two sides.
