

# Cpollo Lightpaper

## Version 1.0

### November 2018

#### Our Mission:

Cpollo aims to offer an easier, safer, and more efficient way for customers and businesses to participate in an Initial Coin offering (ICO), a Parallel Coin Offering (PCO), or for new or existing projects to leverage the transparency and resources the Cpollo platform will offer.

#### Our Vision:

Projects, exchanges, and communities working with Cpollo to create an ecosystem in cryptocurrency where companies will be fully transparent with its investors in order to reduce scams in the industry.

#### Cpollo: A solution to Scams in Crypto

Cpollo will reduce scams in crypto via an auditable ledger where stakeholders can view the progress of a company as they reach critical milestones. The funds being generated through an ICO or PCO will be allocated into a smart contract, constantly being monitored by audit measures designed by Cpollo. Furthermore, open-market businesses who leverage the Cpollo platform will be continuously audited and monitored to reinforce investors' confidence.

Projects must go through a rigorous vetting process before being integrated on the Cpollo platform. Projects on the platform will have a wide variety of services available to them, including a "Team for Hire" section where projects in need of assistance may hire from a pool of Cpollo approved applicants. Cpollo offers services for tokens on the following networks: Ethereum, TRON, NEM, Ether classic, Stellar, Cardano, NEO, Waves, and EOS, with more options being added in the future.

#### Partnerships:

In order to eliminate scams in crypto as well as bring quality projects to the cryptocurrency community, Cpollo has partnered with the McAfee Alliance, IDAX, Bleutrade and Bitker. Projects that are accepted on the Cpollo platform will have priority listing on IDAX, a top cryptocurrency exchange.
