CHECK OUT OUR AIRBOAT RIDES!

THE ORIGINAL EVERGLADES NATIONAL PARK AIRBOAT RIDE

30/40
MINUTE RIDE

If you've been looking for an official airboat ride when visiting Everglades National Park, look no further!

Since 1968, Everglades Safari Park Airboat Tours have educated millions of visitors about Florida's most spectacular natural wonder, the Everglades. There is no need to make a reservation; buy a ticket when you arrive and leave on the next available boat. The Original Everglades National Park airboat ride departs every 20-30 minutes.

PRIVATE ECO-ADVENTURE AIRBOAT RIDE

40
MINUTE RIDE

Journey into the River of Grass and hardwood hammocks aboard a private airboat ride!

This thrilling airboat ride delivers a unique experience as you journey through the legendary Florida Everglades. Our expert guides will take you into the sawgrass prairies where you might encounter king of the Everglades, the American Alligator! You'll see plenty of native flora and fauna to take in while you cruise through the pristine waters of Florida's backyard.

PRIVATE JUNGLE OF WILDERNESS AIRBOAT RIDE

60
MINUTE RIDE

Travel deeper into one of nature's most mysterious places in Florida with our expert guides!

Travel deeper into the mysterious River of Grass and experience breathtaking panoramic views as our expert guides traverse the winding paths in Everglades National park. Enjoy the majesty of everything nature has to offer in this unique biome, where exotic and rare plants and animals can be encountered at any moment. This is a trip that simply can't be missed. Let's go!

YOUR EXPERIENCE JUST KEEPS GETTING BETTER!

Join our expert guides or go at it alone to continue your exploratory adventure! Learn more about the unique wildlife that call the Everglades home in our **Wildlife Nature Show**, take a stroll along our **Nature Trail** and while you're out there, take a look around on our **Observation Platform**.

Take a closer look at some of the animals that call the Florida Everglades home during our interactive **Wildlife Nature Show**. Our expert guides share their experiences and discuss the unique abilities and adaptations the local wildlife use to survive in nature.

Enjoy a leisurely stroll along our winding **Nature Trail**. The Everglades is teeming with exotic birds, reptiles and fish species, have your camera ready to quickly capture the moment. Make sure to stop along the way and absorb the breathtaking panoramic views in all their splendor.

Get a bird's-eye-view of the wilderness that surrounds you on our **Observation Platform**. If you're feeling brave, take a stroll through our exhibits and get up-close and personal with some of the smaller wildlife found throughout Everglades National park.

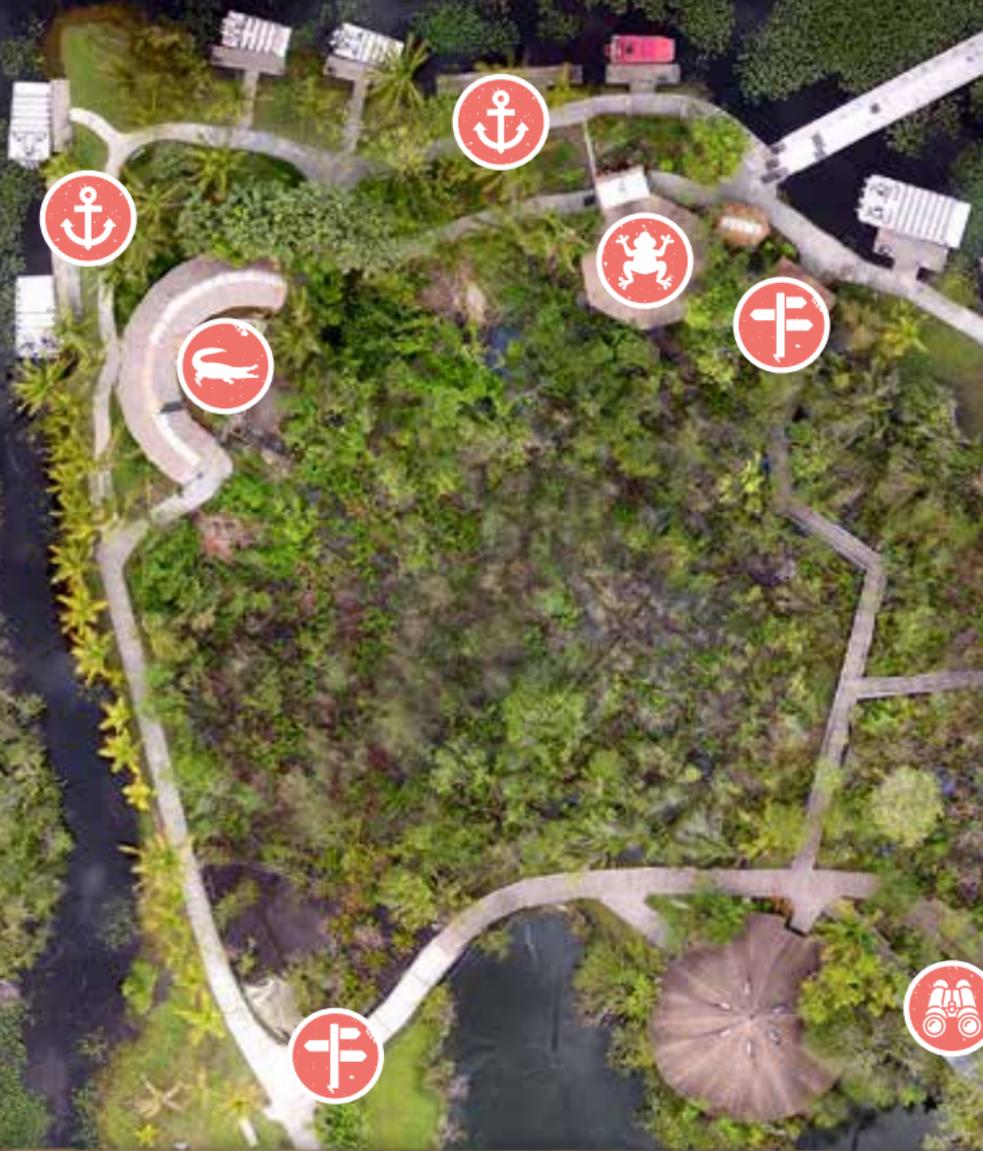

TAKE HOME MORE THAN JUST MEMORIES!

Visit the Safari Gift Shop and grab a few souvenirs to take home. A portion of every sale helps to support Everglades National Park and its conservation programs.

 Ask for our *Made in USA* items.

Consuming raw or undercooked meats, poultry, seafood, or eggs may increase your risk of food-borne illnesses.

COMMON REPTILES

AMERICAN ALLIGATOR

Scientific Name: *Alligator Mississippiensis*

Due to over-hunting, the American Alligator once found itself on the endangered species list prior to the enactment of the Endangered Species Act of 1973.

Thanks to conservation efforts their populations rebounded well enough to be removed from the endangered species list in 1987.

Today, American Alligator populations continue to grow and thrive all over Florida. If you happen to find yourself exploring in the cooler months, you can bet you'll see these famous reptilian predators getting some sun on the grassy banks of the pristine Everglades waters.

These massive reptiles primarily inhabit swamps and marshes although it's not uncommon to find them in other bodies of water like lakes, rivers, and ponds. The American Alligator's typical diet consists of fish, turtles, small mammals, birds, reptiles, and even small and juvenile alligators.

THE DETAILS

SIZE

Males: 11 to 15 feet long

Females: 8 to 10 feet long

COLOR

Colors can range from dark green, gray, and brown to nearly black with a cream-colored underside

HABITAT

Swamps

Marshes

Lakes

Rivers

Ponds

DIET

Fish

Turtles

Small mammals

Birds

Reptiles

Juvenile alligators

DID YOU KNOW?

Although alligators have incredible power to close their jaws, the muscles used to open their mouths are very weak making it easy for even a human to hold their jaws shut.

Alligators have a rounded snout, crocodiles have a "V" shaped snout.

Crocodile

Alligator

AMERICAN CROCODILE

Scientific Name: *Crocodylus Acutus*

A distant cousin of the American Alligator, the American Crocodile is known to inhabit coastal areas of South Florida as well as brackish water and saltwater habitats. They can typically be found in Cuba, Jamaica, Haiti, Dominican Republic, Mexico, and Central and South America, too.

In comparison, crocodiles have long and narrow v-shaped snouts, while alligators have shorter U-shape snouts. Crocodiles eat pretty much anything that moves but typically go for fish, crabs, turtles, snakes, and small mammals, mostly feeding at night.

Unlike their Australian and African crocodile cousins, it's not common for the American Crocodile to attack larger mammals. Contrary to the aggressive reputation, American Crocodiles tend to be shy in nature and would more likely run away from you rather than towards you.

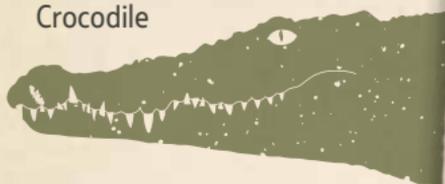

DID YOU KNOW?

The Florida Everglades is the only place in the world where crocodiles and alligators coexist.

DO YOU KNOW THE DIFFERENCE?

You can only see the top teeth when an alligator's mouth is closed. When a crocodile's mouth is closed, you can see both top and bottom teeth.

Crocodile

Alligator

THE DETAILS

SIZE

Males: up to 20 feet long
Females: 8 to 12 feet long

COLOR

Colors can range from dark green, gray, and brown to nearly black with a cream-colored underside.

HABITAT

Coastal areas Saltwater habitats
Brackish water

DIET

Fish Snakes
Crabs Small mammals
Turtles

COMMON MAMMALS

FLORIDA PANTHER

Scientific Name: *Puma concolor coryi*

A subspecies of puma, the Florida panther is the only known breeding population of puma in the Eastern United States. First listed as endangered in 1995, more than 100 documented Florida panthers in the wild thanks in part to the Florida Panther Recovery Program.

Florida panthers tend to be smaller than their cousins in higher elevations; males weigh between 100-160 pounds with females weighing between 50-115 pounds. They are roughly 7 feet in length with tawny, reddish, or grayish brown coats, occasionally melanistic or black coats are seen, too!

Their diet primarily consists of white-tailed deer and wild hogs, however, smaller mammals like raccoons, armadillos, and rabbits are an important supplement when larger prey is less available. Panthers are opportunistic predators and have also been known to prey upon unsecured livestock and even our beloved pets.

THE DETAILS

SIZE

Roughly 7 ft long
Weight: 50 to 115 pounds

COLOR

Tawny, reddish, or grayish brown

HABITAT

Eastern United States

DIET

White-tailed deer
Wild hogs
Raccoons
Armadillos
Rabbits

DID YOU KNOW?

As opportunistic predators, Florida panthers will go after pretty much any animal they can eat, they have even been recorded catching alligators and crocodiles.

RIVER OTTER

Scientific Name: *Lontra canadensis*

These water-obsessed aquatic mammals can be found throughout Florida with the exception of the Florida Keys. Preferring to hangout in freshwater, you'll find River Otters in rivers, creeks, lakes, ponds, and swamps making their homes among tree roots or by digging their own dens.

Their unique, waterproof outer coats also known as guard hairs are typically light to dark, rich brown and protect the undercoat from getting wet when submerged. River Otters take good care of their fur by grooming often, and at up to 5 ft long, there's plenty to keep them busy.

Specialized in finding and capturing prey in the water, River Otters are carnivores meaning their diet is based on fish, frogs, crustaceans, and occasionally a bird or small mammal. As social animals, you'll find these playful critters hanging out in groups that usually consist of a female and her juvenile offspring.

THE DETAILS

SIZE

2.5 ft to 5 ft long
Weighing 10 to 33 pounds

COLOR

Light to dark brown

HABITAT

Rivers, creeks, lakes, ponds, and swamps

DIET

Fish
Frogs
Crustaceans
Birds

DID YOU KNOW?

River Otters need to eat 15% of their body weight a day to survive.

COMMON BIRDS

GREAT BLUE HERON

Scientific Name: *Ardea herodias*

The Great Blue Heron holds the title of the largest wading bird in North America with lengths ranging from 3 ft to 4.5 ft these majestic birds have a massive wingspan of 5.5 ft to 6.6 ft.

Typically found in freshwater lakes, marshes, and along the shallows of rivers, as well as saltwater habitats, great blue herons can also be found foraging and hunting in grasslands and agricultural fields.

Their feathers are a bluish gray with a white chin and dark blue eyebrows ending in a cluster of long dark feathers. A large yellow, blade-like beak enables them to exercise great hunting skills, striking and even impaling their prey with incredible precision. As carnivores, their diet consists of insects, crustaceans, frogs, fish, small reptiles, and mammals. They have been known to hunt squirrels and even baby alligators!

THE DETAILS

SIZE

Up to 4.5 ft long
Wingspan of 5.5 ft to 6.6 ft

COLOR

Bluish gray plumage, white chin, dark blue eyebrows ending in long dark feathers

HABITAT

Freshwater lakes, marshes, and rivers, saltwater habitats, grasslands, and agricultural fields

DIET

Insects
Crustaceans
Frogs

Fish
Small reptiles
Small mammals

DID YOU KNOW?

There is an all-white color morph found specifically in Florida and the Caribbean often referred to as the Great White Heron, but it is in fact the same species.

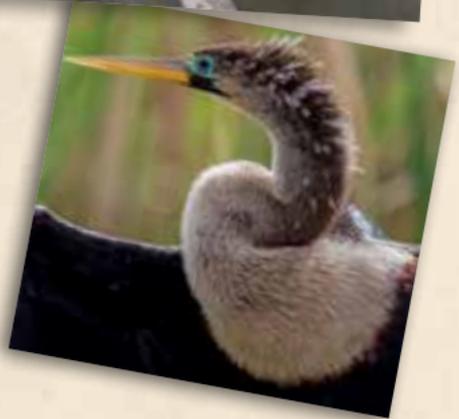

ANHINGA

Scientific Name: *Anhinga anhinga*

Anhingas are tall, slender water birds with long fan-like tails and webbed feet. Year-round residents of sunny Florida, these beautiful birds reach upwards of 2.5 to 3 ft in length with long S-shaped necks. Males are black with silver to white streaks on the wings and back, females and juveniles have a pale tan head, neck, and breast.

Anhingas inhabit shallow freshwater lakes, marshes and ponds and prefer shallow, slow-moving, sheltered waters. Their diet consists of small to medium fish, some crustaceans and invertebrates.

Because their feathers are not coated in oil like many other waterbirds and require time to dry after each aquatic excursion, Anhingas can be seen perched on logs, branches, and shorelines where they spread their wings and tails to catch some rays while the sun dries them off.

THE DETAILS

SIZE

Up to 3 ft long
Wingspan of 3.7 ft

COLOR

Males have black plumage with silver to white streaks on their wings and backs, Females are similar with pale tan heads, necks, and breast

HABITAT

South Florida

DIET

Small to medium fish
Some crustaceans
Invertebrates

DID YOU KNOW?

The Anhinga is a sacred bird to many indigenous communities. Their tail feathers are believed to be powerful medicine, holding energy for healing and clearing energy.
