

Product Manager for Precision Medicine and Cancer Genomics

Cambridge Cancer Genomics (CCG.ai) is a startup on a mission **to ensure that each patient has the right drug, at the right time, to beat their cancer.** We build the software to enable data-driven precision oncology and systematically develop data-driven biomarkers indicative of treatment response.

We believe that increasing amounts of clinical and genomic data have the potential to transform cancer treatment, and enable oncologists to make smarter decisions about which drug to use in which circumstance.

Our platform, OncOS, makes this data accessible to oncologists and helps power adoption of precision oncology. Our biomarker discovery engine, OncAI, helps pharmaceutical companies with complex biomarker discovery for clinical trial stratification and patient selection.

Main duties and responsibilities:

- You'll define the vision and strategy of the product based on market research, an understanding of the company goals, and by looking at the current state of success of the product
- You'll build great relationships with key stakeholders and user groups and work with them to understand the clinical problems that need solving
- You are the eyes, ears and voice of our users and you'll use various research methods to quantify and interpret what they want and need
- Balance individual customer needs with our business needs of building software made to function at scale
- Work across teams to understand the business and customer needs as well as the technical feasibility and timelines to lead product releases
- Build a roadmap of releases to execute on a compelling vision of OncOS
- Have commitment to delivering change and solving complex challenges with analytical and methodical approach to problem solving
- Define requirements through user stories and acceptance criteria
- Within a Scrum framework, work collaboratively with the development teams, coordinating collaborative design, sprint planning and grooming sessions
- Create effective working relationships with teams across the company to communicate progress
- Coordinate with sales and regulatory teams to manage the product release launches
- Measure and analyse feature performance to uncover opportunities to improve our user experience and increase adoption

- Work within our Quality Management System and contribute to usability requirements

We'd like to work with someone who:

- At least 2 years' experience in a Product related role
- Excellent communication and facilitation skills with an engaging, clear and concise manner
- The ability to quickly build trust and credibility with stakeholders
- Great organisational, prioritisation and project management skills
- An evidence-based approach to decision-making: comfortable working with data to turn information into knowledge
- Experience presenting to groups and interacting with users
- A passion for products, health and technology
- Experience of working in an agile/scrum environment

Useful experience (although we are open-minded):

- Experience of working in health/other regulated environment
- Experience of planning and executing customer-based research
- Experience working on a software product

Key details:

Competitive salary depending on experience. Also includes equity and bonus-based remuneration. Our hiring process includes a phone interview, technical challenge, an in-person interview day and reference checks. We aim to complete the hiring process within 4-6 weeks of application.

Other benefits include:

- Flexible hours (outside of core hours)
- Paid personal development days (e.g. hackathons, hosting events, learning to code)
- Potential to attend conferences and meetings worldwide
- Socials
- Free snacks
- Generous annual leave allowance
- Employee discounts (reduced cinema tickets, exclusive discounts, etc.)

People who join us range from academics at leading university research labs to ambitious young developers and machine learning engineers. Team CCG.ai is comprised of talented, innovative, and motivated people that share our vision of transforming cancer treatment. Work at CCG.ai is incredibly varied and we challenge ourselves daily with interesting problems.

As a team, we are committed to working together to positively impact the lives of cancer patients. We are looking for talented people who will fit into our diverse, supportive and stimulating team culture. Our roles will suit people who want space to think creatively, overcome challenges and work together on world-changing technology.

We care about each other and believe that a great workplace is one that represents the world we live in and how beautifully diverse it can be. That means we have no judgement when it comes to any one of the things that make you who you are - your gender, race, sexuality, religion or your secret aversion to cucumber water.

We work all over the world and often socialise together. You'll often find us chatting through interesting problems over a coffee, or playing games with each other over lunch.

Duration: Permanent

Location: Cambridge, UK
