SUBJECT: External Penetration Testing – Letter of Engagement

This letter confirms that TSS Cyber Pty Ltd (TSS) was engaged by SolveXia Pty Ltd (SolveXia) to provide external penetration testing of SolveXia's systems on 30 September 2019.

Founded in 2011 by former Australian Government intelligence and cyber security specialists, TSS Cyber is a specialist information security company delivering discreet, niche and tailored security solutions to best meet the business needs of our clients.

TSS was contracted to perform web application and infrastructure penetration testing on the external network that hosts SolveXia's systems. The penetration tests were performed in line with industry best practice, leveraging mature open source testing frameworks such as OWASP, OSSTMM, NIST SP800-115. Using real-world tools and techniques TSS assessed both the attack surface of SolveXia's systems as well as potential exposure through in-depth testing. All identified security findings, risks and recommendations for improvement were documented and presented to SolveXia for remediation.

This round of penetration testing was conducted and completed in November 2019.

TSS look forward to further opportunities to partner with SolveXia to ensure alignment between their operational systems, security initiatives and organisational goals.

Sincerely,

A handwritten signature in black ink, appearing to read "Richard Byfield".
