SUBJECT: SolveXia Penetration Testing – Letter of Engagement

This letter of engagement confirms that Dragonfly Technologies Pty Ltd (Dragonfly) was engaged by SolveXia Pty Ltd (SolveXia) to provide external penetration testing of SolveXia's systems on 20 November 2020.

Dragonfly was established in 2005 and has since grown to become a trusted name in information security and networking services to Australia's top organisations and government agencies. The Dragonfly team help clients improve their security posture, reduce risk, and connect through leading edge and innovative technologies.

The objective of the penetration test was to identify and exploit security deficiencies in web application and web server infrastructure. Penetration tests were performed in line with industry best practice, leveraging open-source frameworks and methodologies. The test provided SolveXia with the understanding of the identified vulnerabilities, the associated risk and associated risk rating that could give rise to matters relating to a loss in confidentiality and integrity within the applications.

Penetration testing was conducted and completed in December 2020.

Yours sincerely,

Branko Ninkovic
Founder and Executive Director
Dragonfly Technologies Pty Ltd
