

**Realise the full
potential of your
crops this summer.**

Hatuma

Find out how Hatuma will help you grow the best summer crops

Whether you're thinking about sowing crops this season to provide high quality feed later in summer, or are looking for a more sustainable and effective fertiliser option, then Hatuma has the solution for you.

Hatuma has years of proven results with supplying the best nutrients to ensure your crops are high quality and healthy, for your stock and the environment.

WHY USE HATUMA

- Hatuma uses new FuturepHos® as a base product. FuturepHos® supplies a **higher concentration of phosphate** compared to our proven dicalcic phosphate. It's also non-water soluble **so it won't run-off**, fully plant available, and has a **neutral pH**.
- Hatuma can supply you with a **full range of nutrients** in your blends, including Hatuma Generate® Lime, salt, potash, boron, and sustainable nitrogen products.
- Crops like brassicas and fodder beet **need a much higher pH** to become established and Hatuma Blends are the **only products on the market** that fulfil that need.
- All supplied in an easy and cost effective **one-pass-all-done** blend.

Let's talk.

Find out why so many farmers endorse Hatuma to provide the best advice and nutrient solutions for their crops.
