## **You have been scheduled for a: Uroflow (Urine Flow Rate)**

Appt date: \_\_\_\_\_ Appt Time \_\_\_\_\_ Location \_\_\_\_\_

### **Description of procedure**

The uroflow is a study to determine the flow rate of your urine during voiding. To make sure that the test is done properly, you must come to the office with a full bladder. Please do not use the restroom down the hall.

You will be asked upon arrival to void into a measuring device in a private room. You must try to void with as much force as possible. If your bladder isn't full, please drink fluids until it is full to make the test meaningful.

### **Possible risks of procedure**

There are no risks.

### **Preparation for procedure**

It is essential that you come to the office for this test with a full bladder. We recommend that you drink 32 ounces of liquid one hour before your examination. If for some reason you must void before the test starts, make sure that you drink plenty of fluids to refill the bladder as soon as possible. A full bladder gives us the best results.

**IF YOU DO HAVE A BOWEL MOVEMENT IN THE UROFLOW EQUIPMENT WE WILL CHARGE YOU THE CLEANING FEE OF TWO HUNDRED DOLLARS (\$200.00). THIS FEE IS NOT COVERED BY ANY INSURANCE AND WILL BE REQUIRED TO BE PAID BY YOU AT THAT TIME.**
