

A photograph of a two-story brick building with large windows. The words "SEVEN CORNERS" are visible on the upper part of the building. The sky is blue with scattered white clouds. A dark blue semi-transparent banner is overlaid on the bottom half of the image, containing the main title.

Seven Corners Teams Up with Onebridge to Solve Analytics Challenges

Slow, Manual Processes and Untrustworthy Data

Before working with Onebridge, reporting was time consuming, unreliable and manual, consisting mostly of spreadsheets and unchangeable reports.

"Our analysts and business users were pulling data from our transactional database. They would run reports, mish-mash them together and pull them into Excel, and then do a lot of data manipulation, etc. There was a lot of manual work and analysis to get to the data they wanted," says Ryan Brubaker, Chief Information Officer for Seven Corners.

"During agile backlog planning, several items came up for both internal and external customers specifically around visualizations of data," Brubaker continues. "Before partnering with Onebridge, we made multiple attempts at creating a single source of truth for those visualizations to pull from, but they never really seemed to work."

Seven Corners

Seven Corners' travel insurance plans and 247 assistance services help people all over the world navigate their way through travel problems big and small, protecting them from unexpected cancellation and healthcare expenses.

Automation and Reliable Data

The Onebridge managed services team worked with Seven Corners to migrate their data warehouse to the Azure cloud. We remodeled its architecture to align all departments around the types and categories of data collected. We also updated the ETL process to perform more efficiently and accurately. **These efforts created a trustworthy data source that allows business users to create and modify reports on demand in Power BI rather than relying on IT resources** -- plus, many processes were automated to save time and reduce project stalls, downtime, ramp-up, and employee attrition.

“Onebridge has a team of experts, people of varying skill sets across the entire discipline of business intelligence. They definitely bring a multidisciplinary approach to the work that they’re doing. I can always rely on them to bring in the very best person to solve the particular challenge we have.”

Intelligent Decision-Making

Through working with Onebridge, Seven Corners can now base business decisions on reliable data and target vital areas of the business for improvements and investment.

They automated their reporting processes to save a significant amount of time and ensure their data is more trustworthy. A trusted data warehouse now stores valuable data that can be automatically shared with investors and payers, a pivotal aspect of their business. They are now able to get useful insights to drive intelligent decision making through reliable data.
