## THE MISSION

MSB is a developer-first training platform where software engineers can train on real-world engineering challenges using real infrastructure. By replicating top engineering learning environments (Netflix, Google, Uber) we are rethinking dev training from the ground up. Our mission is to democratize access to top engineering (work) experience by merging the worlds of Education & Work and address the global shortage of qualified software engineers.

## THE PLATFORM

We're building an all-new learning medium. Books & documentation have evolved into video tutorials the past decade. We believe we're at the cusp of a fundamentally new learning era that leverages the latest technologies which will finally narrow the gap between education & work. Developers used to *learn by reading*, then *by watching* and are now finally able to *learn by doing*. Because the platform we're building is pushing the limits of what is technically possible - we are looking for exceptional people who've mastered their craft and love challenging the status quo.

## THE ROLE

We're looking for experienced Frontend engineers with experience with Vue.js (or any other reactive framework) with a strong design aesthetic and deep knowledge of browser technologies. We're building the world's most complex browser interface, which will guide our users and allow them deep levels of system introspection while learning. Ideally, you have experience building complex UI transitions and animations and a strong focus on designing the data architecture supporting such systems.

- You are comfortable owning your projects
- You understand reactive state management
- Experience testing complex interfaces
- You love getting things through the finish line
- 5+ yrs experience as a Frontend engineer
- You have a strong portfolio of finished projects

## WHAT WE OFFER

We are backed by top US & EU investors and continue to attract thousands of engineers to MSB. You will join an international team of great engineers who take pride in building a meaningful product with a soul and build the most complex frontend out there. We offer a good salary and will get you the hardware you need to develop your skills and do great work.

To apply please introduce yourself at [work@magicsandbox.com](mailto:work@magicsandbox.com) and include any work that you're proud of.
