

Introducing life[®]

Omega life is the next generation of home care systems that enables more comfortable, independent lives for all of us.

life is built to enable and support people living in their own homes for as long as possible.

A discreet solution of wireless buttons and sensors forms the basis of the system in your loved one's home. This, combined with a smart-phone app, provides notifications and information at your fingertips.

Ambient Assisted Living systems are designed to enable people to stay in their own homes for as long as possible by increasing their autonomy, self-confidence and mobility.

Room movement monitoring - life will alert you if there has been movement or no movement in a room for a period of time set by you. For example, the system will alert you if your loved one hasn't been to the kitchen or living room in the morning, or if they haven't yet left their bedroom. You can easily set the timers yourself, so the system will adapt to your cared for's routine.

Door and window monitoring - The system can alert you if a door has been opened or closed at a certain time, for example the app allows you to be notified if your loved one opens the door at night, or if the door has been left open for a set period of time. It can also be used in a similar way with windows, for example if a window has been left open for long periods in the middle of the winter.

Emergency Buttons - If your loved one needs assistance, emergency buttons can be used to convey the message. This emergency button sends an immediate notification to the app, for the carers, such as your friends and family, to take action. Buttons can be located around the house or as a wearable device.

Appliance equipment control and monitoring - life will notify you if unusual activity has been detected, for example if a kettle has not been turned on for a set amount of time. This will give an indication of any unusual activity or lack of activity. It will also give you the control to turn off appliances, for example if the person you care for has not turned the fan on and it's a really hot day.

The App - The solution is grounded in an easy to use app. It displays information on activity such as door sensor and current location. Messages can be left for each other within a group for instance, about the medical requirements of the person you care for. You can store important contact information for ease of access. There are also emergency, non-emergency and advice helpline contact details.

IMPROVING LIVES

You can easily use the Omega life app on any Android or iOS smart-phone or tablet.

How will life help you ensure the well-being of your loved ones?

Easily installed

 We have made the installation as simple as possible and can, optionally, provide installation by our fully trained and vetted engineers.

Peace of mind

 System set up is very easy, just apply your knowledge of your loved ones day to day lives and alerts will display in the simple to use app. You can rest assured that you will receive alerts when you need them allowing you more peace of mind.

Sharing

 A group can be created in the life app which you can invite others to, meaning care can be shared and reactions to situations can be made faster, as everyone stays constantly informed.

Responsive

 No 3rd parties, no unknown people, no wasted time; the right information delivered directly to you and your group. Within the app, alerts remain active until they are actioned, this can then be fed back to the group so you know everything is as it should be.

Constant Care

 Omega life keeps you informed 24/7 enhancing your ability to care for your loved one. Freeing you from that constant uncertainty, you can get on with your life and enjoy quality time with all your loved ones.

Flexible

 Along with simple set up, we have made the system easy to alter and expand as your needs change. Even if the person you care for moves home, simply take the solution with you.

Protective

 As life helps you care for your loved ones, we constantly care for your system. We take care of all the technical details so you can be confident in your solution at all times. Additionally, your data security is a primary concern for us so we use highly secure systems for all elements of life.

Future Proof

 The life system will be continually developed to ensure the latest technologies can be incorporated, that other equipment and systems can be integrated and that your investment remains a wise one.
